# Chapter 1

## Module Index

### 1.1 Modules

Here is a list of all modules:

DisCosTiC . . . . .	13
---------------------	----

## Chapter 2

# Namespace Index

### 2.1 Namespace List

Here is a list of all namespaces with brief descriptions:

<a href="#">Convert-HEAT</a>	15
<a href="#">Convert-HPCG</a>	25
<a href="#">Convert-POISSONNS</a>	32
<a href="#">Convert-STREAM</a>	44
<a href="#">DataType</a>	
< enumerated types	48
<a href="#">DisCosTiC</a>	
< benchmark test cases	48
<a href="#">diskern</a>	54
<a href="#">plot_machine_file</a>	58
<a href="#">UserInterface</a>	
It parses the user-defined configuration file (.cfg)	59

## Chapter 3

# Hierarchical Index

### 3.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Action	
diskern.AppendStringRange	61
diskern.VersionAction	222
AST	62
DisCosTiC::AST_OP	87
DisCosTiC::AST_OP_	89
DisCosTiC::AST_OP_TYPE	92
DisCosTiC::Benchmark	94
UserInterface::ChromeTraceViz	158
DisCosTiC::CompModel	162
UserInterface::ConfigParser	164
UserInterface::Conversion	167
Convert-HPCG.data	168
DisCosTiC::DisCosTiC_OP	170
DisCosTiC::DisCosTiC_queueOP	173
domain_t	174
ECM	176
DisCosTiC::Grid	178
DisCosTiC::Grid_Init	181
grid_t	183
iterator	
DisCosTiC::std_iter< scalarT >	209
DisCosTiC::iteratorRange< scalarT >::iter	187
DisCosTiC::iteratorRange< scalarT >::iteratorRangeStep::iter	184
DisCosTiC::iteratorRange< scalarT >	188
DisCosTiC::iteratorRange< scalarT >::iteratorRangeStep	190
Machine	192
UserInterface::NetworkConfigParser	194
Convert-HEAT.newNode	198
Convert-POISSONNS.newNode	199
NodeModel	201
DisCosTiC::OpMatcher	205
DisCosTiC::OpTimeComparator	206
Solver	207
UserInterface::TimeRankOP	212

Convert-HEAT.Tree . . . . .	<a href="#">216</a>
Convert-POISSONNS.Tree . . . . .	<a href="#">217</a>
DataType::vector3T< Tx, Ty, Tz > . . . . .	<a href="#">219</a>
UserInterface::YAMLParse . . . . .	<a href="#">223</a>

## Chapter 4

# Class Index

### 4.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">diskern.AppendStringRange</a>	61
<a href="#">AST</a>	62
<a href="#">DisCosTiC::AST_OP</a>	87
<a href="#">DisCosTiC::AST_OP_</a>	89
<a href="#">DisCosTiC::AST_OP_TYPE</a>	92
<a href="#">DisCosTiC::Benchmark</a>	94
<a href="#">UserInterface::ChromeTraceViz</a>	158
<a href="#">DisCosTiC::CompModel</a>	162
<a href="#">UserInterface::ConfigParser</a>	
Wrapper class which contains functions for parsing the configuration file	164
<a href="#">UserInterface::Conversion</a>	
Wrapper class which contain function for the conversion of std::string to primitive types (int, float, double, etc.,)	167
<a href="#">Convert-HPCG.data</a>	168
<a href="#">DisCosTiC::DisCosTiC_OP</a>	170
<a href="#">DisCosTiC::DisCosTiC_queueOP</a>	173
<a href="#">domain_t</a>	174
<a href="#">ECM</a>	176
<a href="#">DisCosTiC::Grid</a>	178
<a href="#">DisCosTiC::Grid_Init</a>	
This class exposes all P graphVec and manages dependencies and execution order. It returns a list of executable operations and offers an interface to mark operations as executed	181
<a href="#">grid_t</a>	183
<a href="#">DisCosTiC::iteratorRange&lt; scalarT &gt;::iteratorRangeStep::iter</a>	184
<a href="#">DisCosTiC::iteratorRange&lt; scalarT &gt;::iter</a>	187
<a href="#">DisCosTiC::iteratorRange&lt; scalarT &gt;</a>	
Iterator ranges for each entityType to support iteration with range-based for loops. Iterating over sets of entityType is one of the most common operation. Our infrastructure implements this custom range-based for loops in the C++ ways by providing iterators and matching begin(), end() and stepSize(scalarT stepSize) methods	188
<a href="#">DisCosTiC::iteratorRange&lt; scalarT &gt;::iteratorRangeStep</a>	
Wrapper class of range-based for loop with certain step size	190
<a href="#">Machine</a>	192
<a href="#">UserInterface::NetworkConfigParser</a>	
Wrapper class which contains functions for parsing the configuration file	194

<a href="#">Convert-HEAT.newNode</a>	198
<a href="#">Convert-POISSONNS.newNode</a>	199
<a href="#">NodeModel</a>	201
<a href="#">DisCosTiC::OpMatcher</a>	
This matches and removes operations from list if found, otherwise returns false	205
<a href="#">DisCosTiC::OpTimeComparator</a>	
This is a comparison functor that can be used to compare and sort <a href="#">DisCosTiC_OP</a> by time	206
<a href="#">Solver</a>	207
<a href="#">DisCosTiC::std_iter&lt; scalarT &gt;</a>	
Time stepping loop	209
<a href="#">UserInterface::TimeRankOP</a>	212
<a href="#">Convert-HEAT.Tree</a>	216
<a href="#">Convert-POISSONNS.Tree</a>	217
<a href="#">DataType::vector3T&lt; Tx, Ty, Tz &gt;</a>	
Class to represent fixed-size three-dimensional vector data-type of arbitrary types with coefficients type, addr, size	219
<a href="#">diskern.VersionAction</a>	222
<a href="#">UserInterface::YAMLParse</a>	223

## Chapter 5

# File Index

### 5.1 File List

Here is a list of all files with brief descriptions:

<a href="#">Doxyfile</a>	229
<a href="#">include/AST.hpp</a>	229
<a href="#">include/CompModel.hpp</a>	233

## Chapter 6

# Module Documentation

### 6.1 DisCosTiC

#### Enumerations

- enum `DisCosTiC::Operation_t` { `DisCosTiC::SEND` = 1, `DisCosTiC::RECV` = 2, `DisCosTiC::COMP` = 3, `DisCosTiC::MSG` =4 }

*The Operation\_t enum defines different operation types of entities.*

- enum `DisCosTiC::Mode_t` { `DisCosTiC::NONBLOCKING`, `DisCosTiC::BLOCKING` }

*The Mode\_t enum defines operation type of SEND and RECV entities (i.e., either blocking calls that reutn on;y on completion of operation or non-blocking calls that return with start of operation)*

#### 6.1.1 Detailed Description

#### 6.1.2 Enumeration Type Documentation

##### 6.1.2.1 Mode\_t

enum `DisCosTiC::Mode_t`

The `Mode_t` enum defines operation type of SEND and RECV entities (i.e., either blocking calls that reutn on;y on completion of operation or non-blocking calls that return with start of operation)

#### Enumerator

NONBLOCKING	isend and irecv MPI routines, non-blocking: next operation not be executed before starting of previous operation
BLOCKING	send and recv MPI routines, blocking: next operation not be executed before finishing of previous operation

### 6.1.2.2 Operation\_t

```
enum DisCosTiC::Operation_t
```

The Operation\_t enum defines different operation types of entities.

#### Enumerator

SEND	send operation type
RECV	recv operation type
COMP	compuation operation type
MSG	message / transmission operation type

## Chapter 7

## 7.1.1 Function Documentation

### 7.1.1.1 checkChildren()

```
def Convert-HEAT.checkChildren (
    node,
    val )
```

Here is the call graph for this function:

### 7.1.1.2 commentsRemover()

```
def Convert-HEAT.commentsRemover (
    code )
```

Here is the call graph for this function:

### 7.1.1.3 compareFunc()

```
def Convert-HEAT.compareFunc (
    funcList,
    name )
```

Here is the call graph for this function:

### 7.1.1.4 deINIT()

```
def Convert-HEAT.deINIT (
    sentence )
```

#### 7.1.1.5 fill\_the\_void()

```
def Convert-HEAT.fill_the_void (  
    newTree,  
    node,  
    name,  
    segmented,  
    funcList )
```

Here is the call graph for this function:

#### 7.1.1.6 findArg()

```
def Convert-HEAT.findArg (  
    node,  
    val )
```

#### 7.1.1.7 findBTWmarkers()

```
def Convert-HEAT.findBTWmarkers (  
    mark1,  
    mark2,  
    sampleStr )
```

Here is the call graph for this function:

#### 7.1.1.8 findNodes()

```
def Convert-HEAT.findNodes (
    name,
    list )
```

Here is the call graph for this function:

#### 7.1.1.9 findPurpose()

```
def Convert-HEAT.findPurpose (
    line )
```

Here is the call graph for this function:

#### 7.1.1.10 findVar()

```
def Convert-HEAT.findVar (
    val,
    lis )
```

Here is the call graph for this function:

#### 7.1.1.11 getMother()

```
def Convert-HEAT.getMother (
    motherNode )
```

Here is the call graph for this function:

#### 7.1.1.12 print\_list()

```
def Convert-HEAT.print_list (
    list )
```

#### 7.1.1.13 traverseDown()

```
def Convert-HEAT.traverseDown (
    node,
    val )
```

Here is the call graph for this function:

### 7.1.2 Variable Documentation

### 7.1.2.1 a

```
Convert-HEAT.a = newNode(line2,"init")
```

### 7.1.2.2 args

```
string Convert-HEAT.args = ''
```

### 7.1.2.3 arguments

```
Convert-HEAT.arguments = result.split(',')
```

### 7.1.2.4 b

```
Convert-HEAT.b = segments.pop()
```

### 7.1.2.5 code

```
def Convert-HEAT.code = [];
```

### 7.1.2.6 code3

```
string Convert-HEAT.code3 = ''
```

### 7.1.2.7 commNode

```
Convert-HEAT.commNode = []
```

### 7.1.2.8 ex

```
Convert-HEAT.ex = open(filepath, 'w')
```

#### 7.1.2.9 execNode

```
def Convert-HEAT.execNode = traverseDown(leaf, "*" + temp[1:min(arguments[0].index("("), arguments[0].index(" "))])
```

#### 7.1.2.10 f

```
Convert-HEAT.f = open('../test/P2P_HEAT.hpp', 'w')
```

#### 7.1.2.11 filename

```
string Convert-HEAT.filename = "heat.c"
```

#### 7.1.2.12 filepath

```
Convert-HEAT.filepath = os.path.join(here, "..", subdir, subdir2, filename)
```

#### 7.1.2.13 here

```
Convert-HEAT.here = os.path.dirname(os.path.realpath(__file__))
```

#### 7.1.2.14 iter

```
Convert-HEAT.iter
```

#### 7.1.2.15 line

```
Convert-HEAT.line = line.strip()
```

#### 7.1.2.16 line2

```
Convert-HEAT.line2 = line.strip()
```

#### 7.1.2.17 mom

```
def Convert-HEAT.mom = getMother(motherNode)
```

#### 7.1.2.18 motherNode

```
list Convert-HEAT.motherNode = [ ]
```

#### 7.1.2.19 n

```
Convert-HEAT.n
```

#### 7.1.2.20 name

```
Convert-HEAT.name
```

#### 7.1.2.21 parNode

```
Convert-HEAT.parNode = node
```

#### 7.1.2.22 prevLine

```
Convert-HEAT.prevLine = line
```

#### 7.1.2.23 prn

```
int Convert-HEAT.prn = 0
```

#### 7.1.2.24 r

```
def Convert-HEAT.r = compareFunc(funcs,n)
```

#### 7.1.2.25 res

```
Convert-HEAT.res = re.search(arguments[1].strip()+" = [0-9]+;", code3)
```

#### 7.1.2.26 result

```
Convert-HEAT.result = leaf.id[leaf.id.find("(")+1:leaf.id.find(";")-1]
```

## Variables

- `a = data()`
- tuple `kernels`
- string `code2 = "`
- list `segments = []`
- string `totalLine = "`
- list `funcList = []`
- def `code = getCode("main.cpp")`
- def `code_1 = clean_code(code)`
- def `nodes = transform_code(code_1)`
- def `forCalls = releventIterations(nodes)`
- list `forCall = []`

## 7.2.1 Function Documentation

### 7.2.1.1 `clean_code()`

```
def Convert-HPCG.clean_code (
    code )
```

Removes all forms of comments from the code and returns a string of the same code without comments or imports

### 7.2.1.2 `cleanup()`

```
def Convert-HPCG.cleanup ( )
```

### 7.2.1.3 `extract_exec()`

```
def Convert-HPCG.extract_exec (
    src,
    name )
```

#### 7.2.1.4 finalize()

```
def Convert-HPCG.finalize (
    nodes,
    kernels,
    a )
```

Here is the call graph for this function:

#### 7.2.1.5 find\_kernel()

```
def Convert-HPCG.find_kernel (
    kernel,
    func,
    output )
```

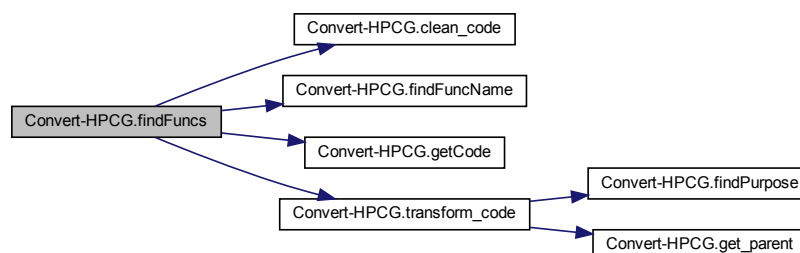

#### 7.2.1.6 findFuncName()

```
def Convert-HPCG.findFuncName (
    line )
```

#### 7.2.1.7 findFuncs()

```
def Convert-HPCG.findFuncs (
    nodes )
```

Here is the call graph for this function:

### 7.2.1.8 findPurpose()

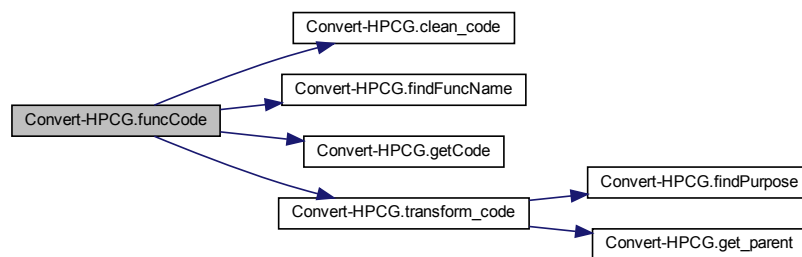

```
def Convert-HPCG.findPurpose (
    line )
```

Takes any line of code and tries to intrepret its purpose while seperating any important names

### 7.2.1.9 funcCode()

```
def Convert-HPCG.funcCode (
    node,
    here )
```

Here is the call graph for this function:

### 7.2.1.10 get\_parent()

```
def Convert-HPCG.get_parent (
    arr )
```

Takes in any array and returns the last appended value.  
If the array is empty then it returns None.

### 7.2.1.11 getCode()

```
def Convert-HPCG.getCode (
    filename )
```

### 7.2.1.12 nodesToTxt()

```
def Convert-HPCG.nodesToTxt (
    nodes )
```

Converts any given list of nodes to text for easier printing

### 7.2.1.13 releventIterations()

```
def Convert-HPCG.releventIterations (
    nodes )
```

Takes all possible nodes and tries to figure out the relevant nodes.  
Picks for loops on the basis of if they are calling any relevant functions  
outputs a list of relevant for loops  
nodes: contains all the nodes in the tree

### 7.2.1.14 selected\_print()

```
def Convert-HPCG.selected_print (
    nodes,
    num,
    kernels )
```

Here is the call graph for this function:

#### 7.2.1.15 transform\_code()

```
def Convert-HPCG.transform_code (
    code )
```

Takes string code and converts it into a tree based on curly brackets.  
Uses the AnyTree Library to create tree and stores 2 extra variables  
src: contains the name of the function being called  
type: contains the type of line of code

Here is the call graph for this function:

#### 7.2.1.16 writeToFile()

```
def Convert-HPCG.writeToFile (
    txt )
```

Writes to the file given the nodes

#### 7.2.1.17 writeToFile2()

```
def Convert-HPCG.writeToFile2 (
    txt,
    filename )
```

Writes to the file given the nodes

### 7.2.2 Variable Documentation

### 7.2.2.1 a

```
Convert-HPCG.a = data()
```

### 7.2.2.2 code

```
def Convert-HPCG.code = getCode("main.cpp")
```

### 7.2.2.3 code2

```
string Convert-HPCG.code2 = ''
```

### 7.2.2.4 code\_1

```
def Convert-HPCG.code_1 = clean_code(code)
```

### 7.2.2.5 forCall

```
list Convert-HPCG.forCall = []
```

### 7.2.2.6 forCalls

```
def Convert-HPCG.forCalls = releventIterations(nodes)
```

### 7.2.2.7 funcList

```
list Convert-HPCG.funcList = []
```

### 7.2.2.8 kernels

```
tuple Convert-HPCG.kernels
```

#### Initial value:

```
1 = ([ "ComputeSPMV_ref", "L"], [ "ComputeWAXPBY_ref", "E"], [ "ComputeDotProduct_ref", "E"],
    [ "ComputeMG_ref", "M"],
2     [ "ComputeProlongation_ref", "E"], [ "ComputeSYMGS_ref", "E"], [ "ComputeRestriction_ref", "E"])
```

### 7.2.2.9 nodes

```
def Convert-HPCG.nodes = transform_code (code_1)
```

### 7.2.2.10 segments

```
list Convert-HPCG.segments = []
```

### 7.2.2.11 totalLine

```
string Convert-HPCG.totalLine = ''
```

### 7.3.1 Function Documentation

### 7.3.1.1 checkChildren()

```
def Convert-POISSONNS.checkChildren (
    node,
    val )
```

Here is the call graph for this function:

### 7.3.1.2 commentsRemover()

```
def Convert-POISSONNS.commentsRemover (
    code )
```

Here is the call graph for this function:

### 7.3.1.3 compareFunc()

```
def Convert-POISSONNS.compareFunc (
    funcList,
    name )
```

Here is the call graph for this function:

#### 7.3.1.4 deINIT()

```
def Convert-POISSONNS.deINIT (  
    sentence )
```

#### 7.3.1.5 fill\_the\_void()

```
def Convert-POISSONNS.fill_the_void (  
    newTree,  
    node,  
    name,  
    segmented,  
    funcList )
```

Here is the call graph for this function:

#### 7.3.1.6 findArg()

```
def Convert-POISSONNS.findArg (  
    node,  
    val )
```

### 7.3.1.7 findBTWmarkers()

```
def Convert-POISSONNS.findBTWmarkers (  
    mark1,  
    mark2,  
    sampleStr )
```

Here is the call graph for this function:

### 7.4.1 Function Documentation

#### 7.4.1.1 clean\_code()

```
def Convert-STREAM.clean_code (
    code )
```

Removes all forms of comments from the code and returns a string of the same code without comments or imports

#### 7.4.1.2 findFuncName()

```
def Convert-STREAM.findFuncName (  
    line )
```

Here is the call graph for this function:

#### 7.4.1.3 findFuncs()

```
def Convert-STREAM.findFuncs (  
    nodes )
```

Here is the call graph for this function:

#### 7.4.1.4 findPurpose()

```
def Convert-STREAM.findPurpose (  
    line )
```

Takes any line of code and tries to intrepret its purpose while seperating any important names

Here is the call graph for this function:

#### 7.4.1.5 `get_parent()`

```
def Convert-STREAM.get_parent (
    arr )
```

Takes in any array and returns the last appended value.  
If the array is empty then it returns None.

#### 7.4.1.6 `getCode()`

```
def Convert-STREAM.getCode (
    filename )
```

#### 7.4.1.7 `nodesToTxt()`

```
def Convert-STREAM.nodesToTxt (
    nodes )
```

Converts any given list of nodes to text for easier printing

#### 7.4.1.8 `releventIterations()`

```
def Convert-STREAM.releventIterations (
    nodes )
```

Takes all possible nodes and tries to figure out the relevant nodes.  
Picks for loops on the basis of if they are calling any relevant functions  
outputs a list of relevant for loops  
nodes: contains all the nodes in the tree

#### 7.4.1.9 transform\_code()

```
def Convert-STREAM.transform_code (  
    code )
```

Takes string code and converts it into a tree based on curly brackets.  
Uses the AnyTree Library to create tree and stores 2 extra variables  
src: contains the name of the function being called  
type: contains the type of line of code

Here is the call graph for this function:

#### 7.4.1.10 writeToFile()

```
def Convert-STREAM.writeToFile (  
    nodes )
```

Writes to the file given the nodes

Here is the call graph for this function:

### 7.4.2 Variable Documentation

#### 7.4.2.1 code

```
def Convert-STREAM.code = getCode("x.cpp")
```

#### 7.4.2.2 code2

```
list Convert-STREAM.code2 = [ ];
```

#### 7.4.2.3 code\_1

```
def Convert-STREAM.code_1 = clean\_code(code)
```

#### 7.4.2.4 forCalls

```
def Convert-STREAM.forCalls = releventIterations(nodes)
```

#### 7.4.2.5 nodes

```
def Convert-STREAM.nodes = transform\_code(code_1)
```

## 7.5 DataType Namespace Reference

< enumerated types

### Classes

- class [vector3T](#)

*a class to represent fixed-size three-dimensional vector data-type of arbitrary types with coefficients type, addr, size*

### 7.5.1 Detailed Description

< enumerated types

## 7.6 DisCosTiC Namespace Reference

< benchmark test cases

## Classes

- struct [AST\\_OP](#)
- struct [AST\\_OP\\_](#)
- struct [AST\\_OP\\_TYPE](#)
- class [Benchmark](#)
- class [CompModel](#)
- struct [DisCosTiC\\_OP](#)
- struct [DisCosTiC\\_queueOP](#)
- class [Grid](#)
- class [Grid\\_Init](#)

*this class exposes all `P` graphVec and manages dependencies and execution order. It returns a list of executable operations and offers an interface to mark operations as executed.*

- struct [iteratorRange](#)

*iterator ranges for each entityTypes to support iteration with range-based for loops. Iterating over sets of entityTypes is one of the most common operation. Our infrastructure implements this custom range-based for loops in the C++ ways by providing iterators and matching `begin()`, `end()` and `stepSize(scalarT stepSize)` methods.*

- struct [OpMatcher](#)

*this matches and removes operations from list if found, otherwise returns false*

- struct [OpTimeComparator](#)

*this is a comparison functor that can be used to compare and sort [DisCosTiC\\_OP](#) by time*

- struct [std\\_iter](#)

*a time stepping loop*

## Typedefs

- using [VecDeserialNode](#) = std::vector< [AST\\_OP\\_TYPE](#) >
- using [Operations](#) = std::vector< [DisCosTiC\\_OP](#) >
- using [ListqueueOp](#) = std::list< [DisCosTiC\\_queueOP](#) >
- using [VecListqueueOp](#) = std::vector< [ListqueueOp](#) >
- using [PriorityQueue\\_t](#) = std::priority\_queue< [DisCosTiC\\_OP](#), [Operations](#), [OpTimeComparator](#) >
- using [Event](#) = std::pair< [DisCosTiC\\_Indextype](#), [DisCosTiC::AST\\_OP \\*](#) >
- using [idNodeTypePairT](#) = std::pair< [DisCosTiC\\_Indextype](#), [DisCosTiC::AST\\_OP\\_](#) >

- def [main](#) ()

## 7.7.1 Detailed Description

Comand line interface of Kerncraft.

## 7.7.2 Function Documentation

### 7.7.2.1 check\_arguments()

```
def diskern.check_arguments (
    args,
    parser )
```

Check arguments passed by user that are not checked by argparse itself.  
Also register files for closing.

### 7.7.2.2 create\_parser()

```
def diskern.create_parser ( )
```

Return argparse parser.

### 7.7.2.3 get\_last\_modified\_datetime()

```
def diskern.get_last_modified_datetime (
    dir_path = os.path.dirname(__file__) )
```

Return datetime object of latest change in kerncraft module directory.

#### 7.7.2.4 identifier\_from\_arguments()

```
def diskern.identifier_from_arguments (
    args,
    ** kwargs )
```

Here is the call graph for this function:

#### 7.7.2.5 int\_or\_str()

```
def diskern.int_or_str (
    s )
```

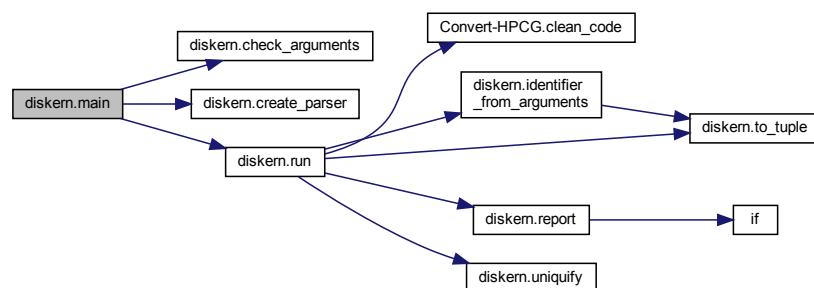

Casts string to int if possible, otherwise return original string.

#### 7.7.2.6 main()

```
def diskern.main ( )
```

Initialize and run command line interface.

Here is the call graph for this function:

### 7.7.2.7 report()

```
def diskern.report (
    model,
    extras,
    system_number,
    output_file )
```

Here is the call graph for this function:

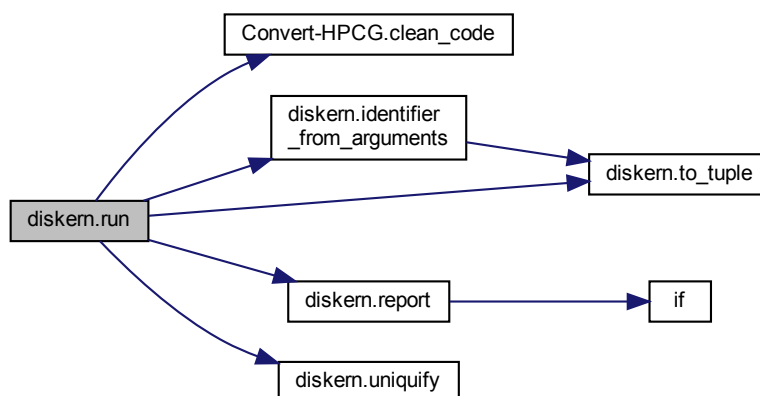

### 7.7.2.8 run()

```
def diskern.run (
    parser,
    args,
    extras,
    system_number,
    output_file = sys.stdout )
```

Run command line interface.

Here is the call graph for this function:

### 7.7.2.9 space()

```
def diskern.space (
    start,
    stop,
    num,
    endpoint = True,
    log = False,
    base = 10 )
```

Return list of evenly spaced integers over an interval.  
Numbers can either be evenly distributed in a linear space (if *\*log\** is False) or in a log space (if *\*log\** is True). If *\*log\** is True, *base* is used to define the log space basis.  
If *\*endpoint\** is True, *\*stop\** will be the last returned value, as long as *\*num\** >= 2.

### 7.7.2.10 to\_tuple()

```
def diskern.to_tuple (
    x )
```

Transform nested lists (and tuple) in purely nested tuples.

### 7.7.2.11 uniquify()

```
def diskern.uniquify (
    l )
```

## 7.8 plot\_machine\_file Namespace Reference

### Functions

- def [main](#) ()

### Variables

- string [kernel\\_colors](#) = 'bgcrmyk'

### 7.8.1 Function Documentation

### 7.8.1.1 main()

```
def plot_machine_file.main ( )
```

## 7.8.2 Variable Documentation

### 7.8.2.1 kernel\_colors

```
string plot_machine_file.kernel_colors = 'bgrcmyk'
```

## 7.9 UserInterface Namespace Reference

it parses the user-defined configuration file (.cfg)

### Classes

- class [ChromeTraceViz](#)
- class [ConfigParser](#)  
*a wrapper class which contains functions for parsing the configuration file*
- class [Conversion](#)  
*a wrapper class which contain function for the conversion of std::string to primitive types (int, float, double, etc..)*
- class [NetworkConfigParser](#)  
*a wrapper class which contains functions for parsing the configuration file*
- class [TimeRankOP](#)
- class [YAMLParser](#)

### 7.9.1 Detailed Description

it parses the user-defined configuration file (.cfg)

it parses the user-defined configuration file (.yaml)

## Chapter 8

# Class Documentation

### 8.1 diskern.AppendStringRange Class Reference

Inheritance diagram for diskern.AppendStringRange:

Collaboration diagram for diskern.AppendStringRange:

### Public Member Functions

- def `__call__` (self, parser, namespace, [values](#), option\_string=None)

### 8.1.1 Detailed Description

Argparse Action to append integer range from string.  
 A range description must have the following format: start[-stop[:num[log[base]]]]  
 if stop is given, a list of integers is compiled  
 if num is given, an evenly spaced list of integers from start to stop is compiled  
 if log is given, the integers are evenly spaced on a log space  
 if base is given, the integers are evenly spaced on that base (default: 10)

### 8.1.2 Member Function Documentation

#### 8.1.2.1 `__call__()`

```
def diskern.AppendStringRange.__call__ (
    self,
    parser,
    namespace,
    values,
    option_string = None )
```

Execute action.

Here is the call graph for this function:

## 8.2.1 Constructor & Destructor Documentation

### 8.2.1.1 AST()

```
AST::AST (
    UserInterface::ConfigParser * CFG_args,
    DisCosTiC_Datatype numRanks ) [inline]
```

constructor that initializes the coordinates for sendCount, recvCount, compCount, rankCount, depCount, and curtag.  
(create filename)

Parameters

<i>CFG_args</i>	and numRanks
-----------------	--------------

Here is the call graph for this function:

### 8.2.1.2 ~AST()

```
AST::~AST ( ) [inline]
```

destructor

## 8.2.2 Member Function Documentation

### 8.2.2.1 addNode()

```
DisCosTiC::AST_OP* AST::addNode ( ) [inline]
```

### 8.2.2.2 blocking()

```
void AST::blocking (
    DisCosTiC_Indextype src,
    DisCosTiC_Indextype dest ) [inline]
```

perform computation operation

#### Parameters

in	<i>name</i>	of computational phase (opname) of string datatype
in	<i>time</i>	of computational phase (bufSize) of DisCosTiC_Timetype datatype

dependency on blocking send/rcv operation that satisfied with start of an operation. Dependency means that a can not be executed before b is finished

#### Parameters

in	<i>src</i>	of DisCosTiC_Indextype datatype
in	<i>dest</i>	of DisCosTiC_Indextype datatype

Here is the call graph for this function:

### 8.2.2.3 blockingDep()

```
void AST::blockingDep (
    DisCosTiC::Event a,
    DisCosTiC::Event b ) [inline]
```

Here is the call graph for this function:

#### 8.2.2.4 EndOp()

```
locopPair_t AST::EndOp ( ) [inline]
```

complete an operation

#### 8.2.2.5 EraseSrcDest()

```
void AST::EraseSrcDest (
    DisCosTiC_Indextype src,
    DisCosTiC_Indextype dest ) [inline]
```

EraseSrcDest from independent set.

##### Parameters

in	<i>src</i>	of DisCosTiC_Indextype datatype
in	<i>dest</i>	of DisCosTiC_Indextype datatype

#### 8.2.2.6 Exec()

```
DisCosTiC::Event AST::Exec (
    std::string opname,
    DisCosTiC::Event depOP1,
    UserInterface::YAMLParser YAML_args,
    DisCosTiC_Datatype process_Rank,
    DisCosTiC_Datatype N_size_Of_Cluster,
    MPI_Comm comm ) [inline]
```

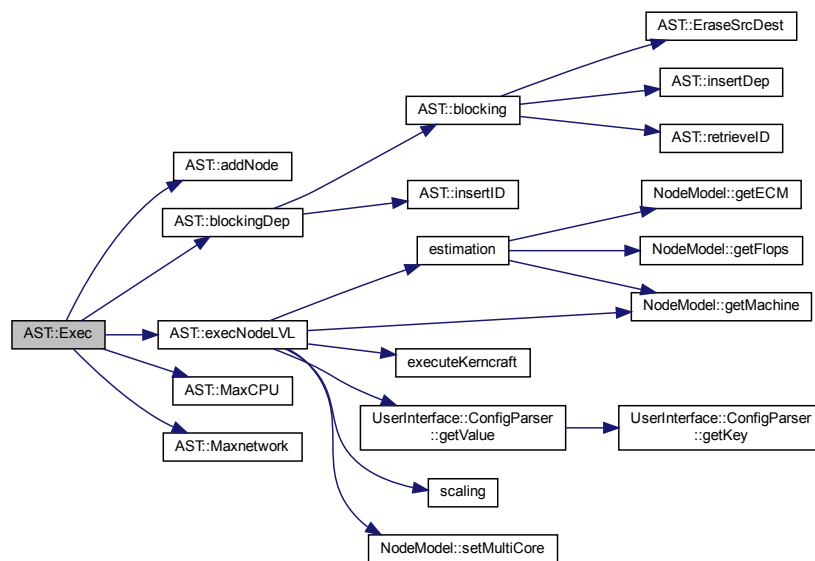

perform computation operation with blocking communication routines

## Parameters

in	<i>name</i>	of computational phase (opname) of string datatype
in	<i>time</i>	of computational phase (bufSize) of DisCosTiC_Timetype datatype
in	<i>node</i>	number of multinode system (node) of integer datatype

Here is the call graph for this function:

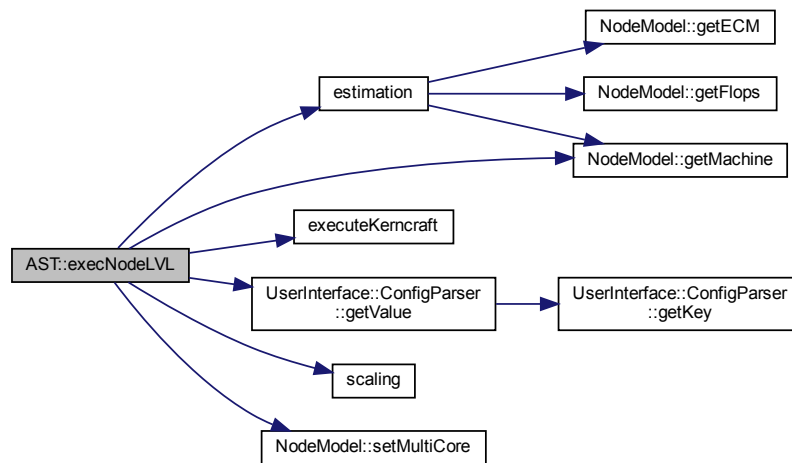

## 8.2.2.7 execNodeLVL()

```

void AST::execNodeLVL (
    std::string & opname,
    UserInterface::YAMLParse YAML_args,
    DisCosTiC_Timetype * rt,
    DisCosTiC_Datatype process_Rank,
    DisCosTiC_Datatype N_size_Of_Cluster,
    MPI_Comm comm ) [inline]

```

Here is the call graph for this function:

### 8.2.2.8 File\_Write()

```
void AST::File_Write ( ) [inline]
```

write to output file

### 8.2.2.9 getNumOps()

```
DisCosTiC_Datatype AST::getNumOps ( ) [inline]
```

get the number of operations for each rank

### 8.2.2.10 lexec()

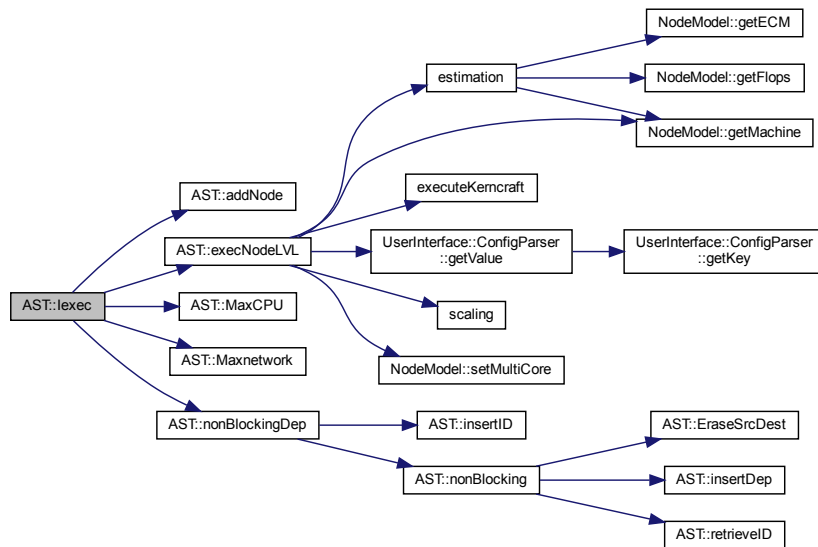

```
DisCosTiC::Event AST::lexec (
    std::string opname,
    UserInterface::YAMLParser YAML_args,
    DisCosTiC::Event depOP1,
    DisCosTiC_Datatype process_Rank,
    DisCosTiC_Datatype N_size_Of_Cluster,
    MPI_Comm comm ) [inline]
```

perform computation operation with non-blocking communication routines

## Parameters

in	<i>name</i>	of computational phase (opname) of string datatype
in	<i>time</i>	of computational phase (bufSize) of DisCosTiC_Timetype datatype
in	<i>node</i>	number of multinode system (node) of integer datatype

Here is the call graph for this function:

## 8.2.2.11 insertDep()

```

void AST::insertDep (
    std::map< std::string, std::string > * depTable,
    char * ID1,
    char * ID2 ) [inline]

```

## 8.2.2.12 insertdeserialID()

```

void AST::insertdeserialID (
    std::map< std::string, DisCosTiC::AST_OP_TYPE > * idTable,
    char * ID,
    DisCosTiC::AST_OP_TYPE op ) [inline]

```

### 8.2.2.13 insertID()

```
void AST::insertID (
    std::map< std::string, DisCosTiC::AST_OP * > * idTable,
    char * ID,
    DisCosTiC::AST_OP * op ) [inline]
```

### 8.2.2.14 InsertSrcDest()

```
void AST::InsertSrcDest ( ) [inline]
```

append to independent set

### 8.2.2.15 Irecv() [1/2]

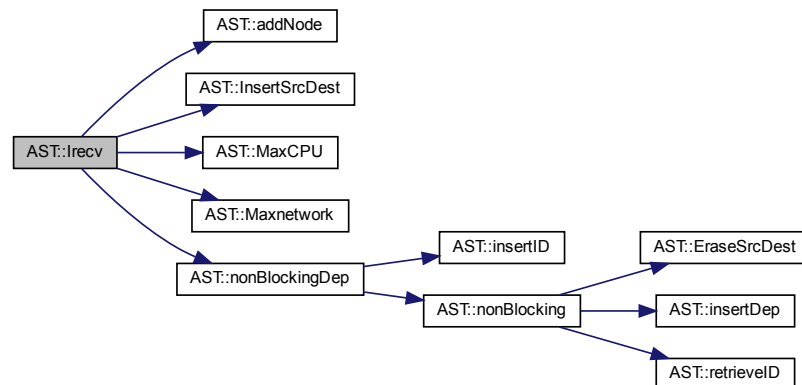

```
DisCosTiC::Event AST::Irecv (
    const void * buf,
    DisCosTiC_Datatype bufsize,
    MPI_Datatype datatype,
    DisCosTiC_Datatype src,
    int tag,
    MPI_Comm comm,
    MPI_Request * request,
    DisCosTiC::Event depOP ) [inline]
```

perform a non-blocking message receiving operation

#### Parameters

in	<i>the</i>	maximum number of receiving buffer elements (bufsize: message size in bytes) of integer datatype of each send buffer element
in	<i>source</i>	rank (src) of integer datatype

Here is the call graph for this function:

### 8.2.2.16 Irecv() [2/2]

```

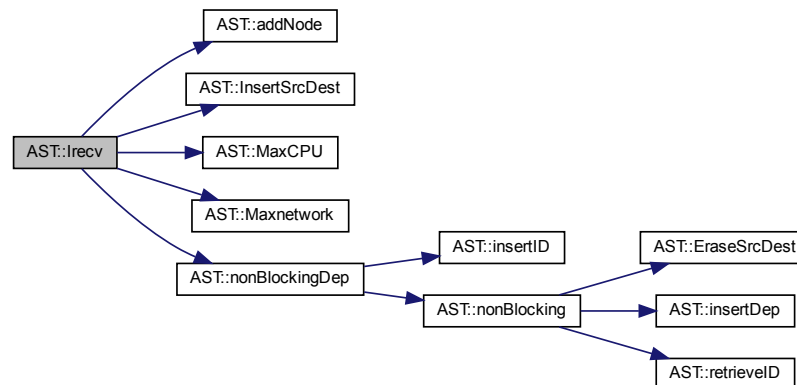

DisCosTiC::Event AST::Irecv (
    DisCosTiC_Datatype bufsize,
    DisCosTiC_Datatype src,
    DisCosTiC::Event depOP ) [inline]
  
```

perform a non-blocking message receiving operation

#### Parameters

in	<i>the</i>	maximum number of receiving buffer elements (bufsize: message size in bytes) of integer datatype of each send buffer element
in	<i>source</i>	rank (src) of integer datatype

Here is the call graph for this function:

### 8.2.2.17 Irecv() [1/2]

```

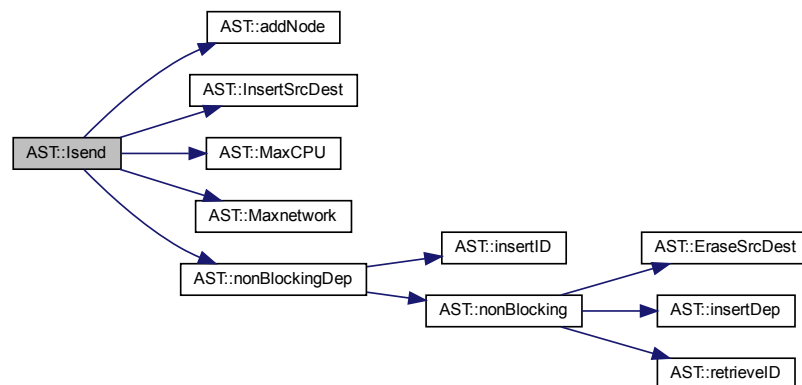

DisCosTiC::Event AST::Irecv (
    const void * buf,
    DisCosTiC_Datatype bufsize,
    MPI_Datatype datatype,
    DisCosTiC_Datatype dst,
    int tag,
    MPI_Comm comm,
    MPI_Request * request,
    DisCosTiC::Event depOP ) [inline]
  
```

perform a non-blocking message sending operation

#### Parameters

in	<i>the</i>	number of sending buffer elements (bufsize) of integer datatype of each send buffer element
in	<i>destination</i>	rank (dst) of integer datatype

Here is the call graph for this function:

### 8.2.2.18 Isend() [2/2]

```

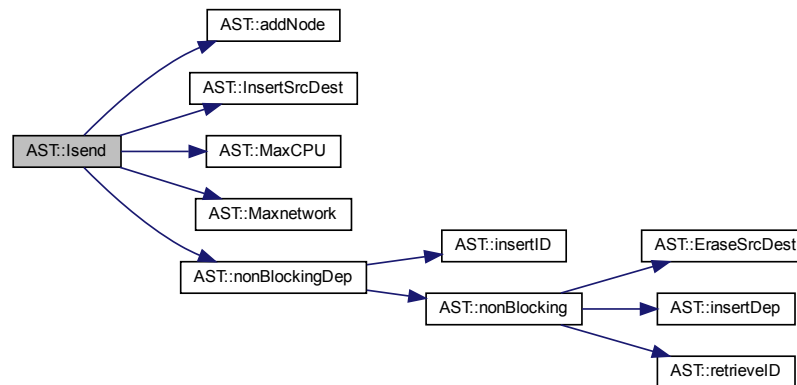

DisCosTiC::Event AST::Isend (
    DisCosTiC_Datatype bufsize,
    DisCosTiC_Datatype dst,
    DisCosTiC::Event depOP ) [inline]
  
```

perform a non-blocking message sending operation

#### Parameters

in	<i>the</i>	number of sending buffer elements (bufsize) of integer datatype of each send buffer element
in	<i>destination</i>	rank (dst) of integer datatype

Here is the call graph for this function:

### 8.2.2.19 MaxCPU()

```
DisCosTiC_Datatype AST::MaxCPU (
    DisCosTiC_Datatype node = 0 ) [inline]
```

### 8.2.2.20 Maxnetwork()

```
DisCosTiC_Datatype AST::Maxnetwork (
    DisCosTiC_Datatype network = 0 ) [inline]
```

### 8.2.2.21 nonBlocking()

```
void AST::nonBlocking (
    DisCosTiC_Indextype src,
    DisCosTiC_Indextype dest ) [inline]
```

dependency on non-blocking send/recv operation that satisfied with start of an operation while link to wait/test loop  
StartDependency means that a can not be executed before b is started

#### Parameters

in	<i>src</i>	of DisCosTiC_Indextype datatype
in	<i>dest</i>	of DisCosTiC_Indextype datatype

Here is the call graph for this function:

#### 8.2.2.22 nonBlockingDep()

```
void AST::nonBlockingDep (
    DisCosTiC::Event a,
    DisCosTiC::Event b ) [inline]
```

Here is the call graph for this function:

#### 8.2.2.23 print\_depTable()

```
void AST::print_depTable ( ) [inline]
```

DEBUG: printing table that consist of respective node dependencies.

Here is the call graph for this function:

#### 8.2.2.24 `print_indicesDeserializedTable()`

```
void AST::print_indicesDeserializedTable ( ) [inline]
```

Here is the call graph for this function:

#### 8.2.2.25 `print_indicesTable()`

```
void AST::print_indicesTable ( ) [inline]
```

DEBUG: printing table that consists of node id with node type.

Here is the call graph for this function:

**8.2.2.26 Rank\_Finalize()**

```
void AST::Rank_Finalize ( ) [inline]
```

end of each process runtime with closing loop

**8.2.2.27 Rank\_Init()**

```
void AST::Rank_Init (
    DisCosTiC_Datatype rank ) [inline]
```

start a rank

**Parameters**

in	<i>processor</i>	rank of integer type
----	------------------	----------------------

< reset label counterHere is the call graph for this function:

**8.2.2.28 Recv() [1/2]**

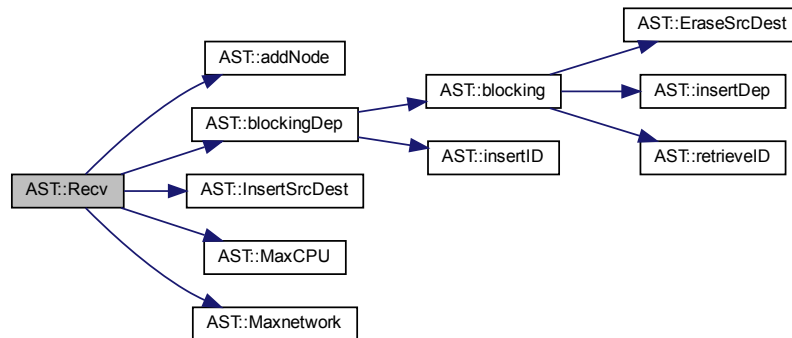

```
DisCosTiC::Event AST::Recv (
    const void * buf,
    DisCosTiC_Datatype bufsize,
    MPI_Datatype datatype,
    DisCosTiC_Datatype src,
    int tag,
    MPI_Comm comm,
    MPI_Request * request,
    DisCosTiC::Event depOP ) [inline]
```

perform a message receiving operation

**Parameters**

in	<i>the</i>	maximum number of receiving buffer elements (bufsize: message size in bytes) of integer datatype of each send buffer element
in	<i>source</i>	rank (src) of integer datatype

Here is the call graph for this function:

#### 8.2.2.29 Recv() [2/2]

```

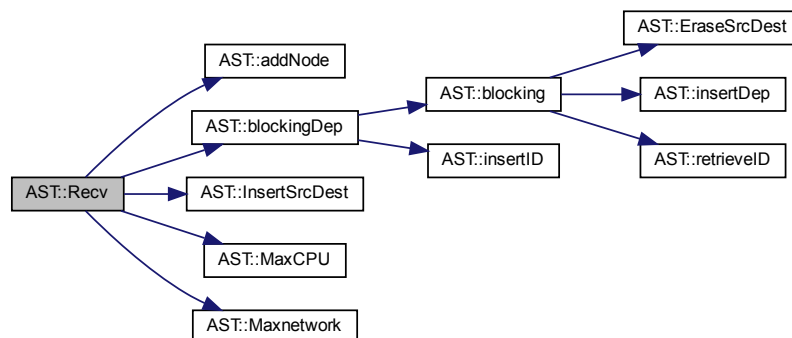

DisCosTiC::Event AST::Recv (
    DisCosTiC_Datatype bufsize,
    DisCosTiC_Datatype src,
    DisCosTiC::Event depOP ) [inline]
  
```

perform a message receiving operation

##### Parameters

in	<i>the</i>	maximum number of receiving buffer elements (bufsize: message size in bytes) of integer datatype of each send buffer element
in	<i>source</i>	rank (src) of integer datatype

Here is the call graph for this function:

### 8.2.2.30 retrievedeserialID()

```
DisCosTiC::AST_OP_TYPE AST::retrievedeserialID (
    std::map< std::string, DisCosTiC::AST_OP_TYPE > * idTable,
    std::string id ) [inline]
```

### 8.2.2.31 retrieveID()

```
DisCosTiC::AST_OP* AST::retrieveID (
    std::map< std::string, DisCosTiC::AST_OP * > * idTable,
    std::string id ) [inline]
```

### 8.2.2.32 Send() [1/2]

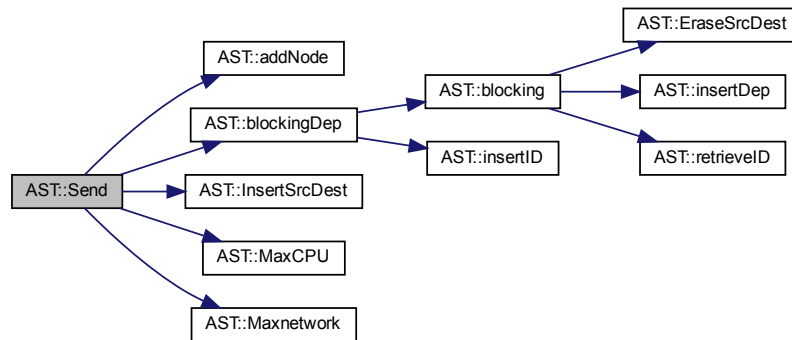

```
DisCosTiC::Event AST::Send (
    const void * buf,
    DisCosTiC_Datatype bufsize,
    MPI_Datatype datatype,
    DisCosTiC_Datatype dst,
    int tag,
    MPI_Comm comm,
    MPI_Request * request,
    DisCosTiC::Event depOP ) [inline]
```

perform a message sending operation

#### Parameters

in	<i>the</i>	number of sending buffer elements (bufsize) of integer datatype of each send buffer element
in	<i>destination</i>	rank (dst) of integer datatype

Here is the call graph for this function:

### 8.2.2.33 Send() [2/2]

```

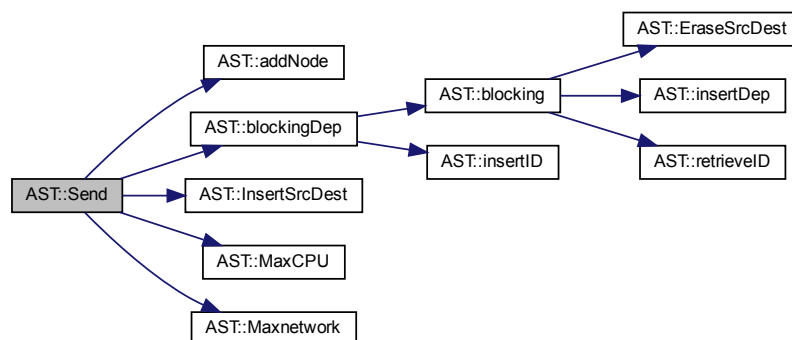

DisCosTiC::Event AST::Send (
    DisCosTiC_Datatype bufsize,
    DisCosTiC_Datatype dst,
    DisCosTiC::Event depOP ) [inline]
  
```

perform a message sending operation

#### Parameters

in	<i>the</i>	number of sending buffer elements (bufsize) of integer datatype of each send buffer element
in	<i>destination</i>	rank (dst) of integer datatype

Here is the call graph for this function:

### 8.2.2.34 SetNumRanks()

```
void AST::SetNumRanks (
    DisCosTiC_Datatype nr ) [inline]
```

### 8.2.2.35 SetRank()

```
void AST::SetRank (
    DisCosTiC_Datatype r ) [inline]
```

### 8.2.2.36 Settag()

```
void AST::Settag (
    DisCosTiC_Datatype tag ) [inline]
```

set a tag

#### Parameters

in	<i>message</i>	tag of integer type
----	----------------	---------------------

### 8.2.2.37 StartOp()

```
void AST::StartOp ( ) [inline]
```

start an operation

## 8.2.3 Member Data Documentation

### 8.2.3.1 allNodes

```
std::vector<DisCosTiC::AST_OP *> AST::allNodes
```

### 8.3.1 Member Data Documentation

#### 8.3.1.1 bufSize

`DisCosTiC_Timetype DisCosTiC::AST_OP::bufSize`

number of bytes (data size) of this operation

#### 8.3.1.2 depCount

`DisCosTiC_Indextype DisCosTiC::AST_OP::depCount`

#### 8.3.1.3 DepOperations

`std::vector<AST_OP *> DisCosTiC::AST_OP::DepOperations`

dependencies for blocking routines, i.e., other operations that depend on this current operation

#### 8.3.1.4 IdepOperations

`std::vector<AST_OP *> DisCosTiC::AST_OP::IdepOperations`

dependencies for non-blocking routines, i.e., other operations that depend on current operation

#### 8.3.1.5 label

`DisCosTiC_Indextype DisCosTiC::AST_OP::label`

index/identifier of this operation for each rack

#### 8.3.1.6 mode

`char DisCosTiC::AST_OP::mode`

TODO: add blocking/non-blocking mode.

#### 8.3.1.7 network

`DisCosTiC_Indextype DisCosTiC::AST_OP::network`

type of network for this operation

#### 8.3.1.8 node

`DisCosTiC_Indextype DisCosTiC::AST_OP::node`

node or processing element for this operation

#### 8.3.1.9 tag

`DisCosTiC_Indextype DisCosTiC::AST_OP::tag`

tag of [AST\\_OP](#) (no real tag for comp, just added for completeness)

#### 8.3.1.10 target

`DisCosTiC_Indextype DisCosTiC::AST_OP::target`

rank of target/partner (source for recv / dest for send / no real target for comp, just added for completeness)

#### 8.3.1.11 type

`char DisCosTiC::AST_OP::type`

type of [AST\\_OP](#) send, receive or computation

## 8.6.1 Constructor & Destructor Documentation

### 8.6.1.1 Benchmark() [1/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.2 ~Benchmark() [1/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

### 8.6.1.3 Benchmark() [2/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.4 ~Benchmark() [2/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

### 8.6.1.5 Benchmark() [3/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.6 ~Benchmark() [3/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

### 8.6.1.7 Benchmark() [4/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.8 ~Benchmark() [4/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.9 Benchmark() [5/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.10 ~Benchmark() [5/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

### 8.6.1.11 Benchmark() [6/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.12 ~Benchmark() [6/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

### 8.6.1.13 Benchmark() [7/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.14** `~Benchmark()` [7/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.15** `Benchmark()` [8/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.16** `~Benchmark()` [8/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.17** `Benchmark()` [9/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

## 8.6.1.18 ~Benchmark() [9/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

## 8.6.1.19 Benchmark() [10/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

## 8.6.1.20 ~Benchmark() [10/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.21 Benchmark() [11/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                          |  |
|--------------------------|--|
| <a href="#">CFG_args</a> |  |
|--------------------------|--|

Here is the call graph for this function:

#### 8.6.1.22 ~Benchmark() [11/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.23 Benchmark() [12/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                          |  |
|--------------------------|--|
| <a href="#">CFG_args</a> |  |
|--------------------------|--|

Here is the call graph for this function:

#### 8.6.1.24 ~Benchmark() [12/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.25 Benchmark() [13/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.26 ~Benchmark() [13/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.27 Benchmark()** [14/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

**Parameters**

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.28 ~Benchmark()** [14/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.29 Benchmark()** [15/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

**Parameters**

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.30** `~Benchmark()` [15/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.31** `Benchmark()` [16/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.32** `~Benchmark()` [16/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.33** `Benchmark()` [17/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.34 ~Benchmark() [17/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

### 8.6.1.35 Benchmark() [18/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.36 ~Benchmark() [18/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

### 8.6.1.37 Benchmark() [19/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.38 ~Benchmark() [19/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

### 8.6.1.39 Benchmark() [20/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.40 ~Benchmark() [20/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.41 Benchmark() [21/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.42 ~Benchmark() [21/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.43 Benchmark()** [22/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.44 Benchmark()** [23/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.45 ~Benchmark()** [22/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.46 Benchmark()** [24/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

**Parameters**

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.47 ~Benchmark()** [23/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.48 Benchmark()** [25/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

**Parameters**

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.49 ~Benchmark()** [24/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.50 Benchmark()** [26/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.51 ~Benchmark()** [25/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.52 Benchmark()** [27/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.53 ~Benchmark() [26/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

### 8.6.1.54 Benchmark() [28/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.55 ~Benchmark() [27/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.56 Benchmark() [29/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.57 ~Benchmark() [28/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.58 Benchmark() [30/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.59 ~Benchmark() [29/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.60 Benchmark() [31/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.61 ~Benchmark() [30/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.62 Benchmark()** [32/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.63 ~Benchmark()** [31/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.64 Benchmark()** [33/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.65 ~Benchmark()** [32/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.66 Benchmark()** [34/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.67 ~Benchmark()** [33/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.68 Benchmark()** [35/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.69 Benchmark() [36/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.70 Benchmark() [37/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.71 ~Benchmark() [34/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.72 Benchmark() [38/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.73 ~Benchmark() [35/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.74 Benchmark() [39/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.75 ~Benchmark() [36/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.76 Benchmark() [40/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.77 ~Benchmark()** [37/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.78 Benchmark()** [41/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.79 ~Benchmark()** [38/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.80 Benchmark()** [42/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

## 8.6.1.81 ~Benchmark() [39/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

## 8.6.1.82 Benchmark() [43/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

## 8.6.1.83 ~Benchmark() [40/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.84 Benchmark() [44/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                          |  |
|--------------------------|--|
| <a href="#">CFG_args</a> |  |
|--------------------------|--|

Here is the call graph for this function:

#### 8.6.1.85 ~Benchmark() [41/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.86 Benchmark() [45/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                          |  |
|--------------------------|--|
| <a href="#">CFG_args</a> |  |
|--------------------------|--|

Here is the call graph for this function:

#### 8.6.1.87 ~Benchmark() [42/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.88 Benchmark() [46/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.89 ~Benchmark() [43/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.90 Benchmark()** [47/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

**Parameters**

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.91 ~Benchmark()** [44/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.92 Benchmark()** [48/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

**Parameters**

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.93** ~Benchmark() [45/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.94** Benchmark() [49/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

**8.6.1.95** ~Benchmark() [46/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

**8.6.1.96** Benchmark() [50/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.97 Benchmark() [51/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.98 ~Benchmark() [47/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

### 8.6.1.99 Benchmark() [52/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.100 ~Benchmark() [48/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

### 8.6.1.101 Benchmark() [53/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

## Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

### 8.6.1.102 ~Benchmark() [49/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.103 Benchmark() [54/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.104 ~Benchmark() [50/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.105 Benchmark() [55/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.106 ~Benchmark() [51/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

#### 8.6.1.107 Benchmark() [56/56]

```
DisCosTiC::Benchmark::Benchmark (
    UserInterface::ConfigParser * CFG_args ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |  |
|-----------------|--|
| <i>CFG_args</i> |  |
|-----------------|--|

Here is the call graph for this function:

#### 8.6.1.108 ~Benchmark() [52/52]

```
DisCosTiC::Benchmark::~~Benchmark ( ) [inline]
```

destructor

## 8.6.2 Member Function Documentation

### 8.6.2.1 File\_Write() [1/2]

```
DisCosTiC DisCosTiC::Benchmark::File_Write ( )
```

### 8.6.2.2 File\_Write() [2/2]

```
DisCosTiC DisCosTiC::Benchmark::File_Write ( )
```

### 8.6.2.3 GetNumCores() [1/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

### 8.6.2.4 GetNumCores() [2/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

### 8.6.2.5 GetNumCores() [3/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

### 8.6.2.6 GetNumCores() [4/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.7 GetNumCores()** [5/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.8 GetNumCores()** [6/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.9 GetNumCores()** [7/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.10 GetNumCores()** [8/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.11 GetNumCores()** [9/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.12 GetNumCores()** [10/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.13 GetNumCores()** [11/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.14 GetNumCores()** [12/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.15 GetNumCores()** [13/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.16 GetNumCores()** [14/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.17 GetNumCores()** [15/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.18 GetNumCores()** [16/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.19 GetNumCores()** [17/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.20 GetNumCores()** [18/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.21 GetNumCores()** [19/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]
```

the maximum number of the nodes

**8.6.2.22 GetNumCores()** [20/52]

```
uint8_t DisCosTiC::Benchmark::GetNumCores ( ) [inline]

#### 8.7.1 Constructor & Destructor Documentation

### 8.7.1.1 ChromeTraceViz()

```
UserInterface::ChromeTraceViz::ChromeTraceViz (
    UserInterface::ConfigParser * args_info,
    DisCosTiC_Datatype rank,
    DisCosTiC_Datatype numRanks ) [inline]
```

Here is the call graph for this function:

### 8.7.1.2 ~ChromeTraceViz()

```
UserInterface::ChromeTraceViz::~~ChromeTraceViz ( ) [inline]
```

## 8.7.2 Member Function Documentation

### 8.7.2.1 args()

```
void UserInterface::ChromeTraceViz::args (
    std::string args_name,
    DisCosTiC_Indextype rank ) [inline]
```

### 8.7.2.2 closeFile()

```
void UserInterface::ChromeTraceViz::closeFile ( ) [inline]
```

print metadata for trace to output file

### 8.7.2.3 completeEvents()

```
void UserInterface::ChromeTraceViz::completeEvents (
    std::string name,
    DisCosTiC_Indextype rank,
    DisCosTiC_Indextype tid,
    std::string time,
    std::string duration ) [inline]
```

### 8.7.2.4 durationEventBegin()

```
void UserInterface::ChromeTraceViz::durationEventBegin (
    std::string name,
    DisCosTiC_Indextype rank,
    DisCosTiC_Indextype tid,
    std::string time ) [inline]
```

### 8.7.2.5 durationEventEnd()

```
void UserInterface::ChromeTraceViz::durationEventEnd (
    std::string name,
    DisCosTiC_Indextype rank,
    DisCosTiC_Indextype tid,
    std::string time ) [inline]
```

### 8.7.2.6 flowEventBegin()

```
void UserInterface::ChromeTraceViz::flowEventBegin (
    std::string name,
    DisCosTiC_Indextype source,
    DisCosTiC_Indextype source_tid,
    std::string time,
    DisCosTiC_Indextype index ) [inline]
```

### 8.7.2.7 flowEventEnd()

```
void UserInterface::ChromeTraceViz::flowEventEnd (
    std::string name,
    DisCosTiC_Indextype dest,
    DisCosTiC_Indextype dest_tid,
    std::string time,
    DisCosTiC_Indextype index ) [inline]
```

### 8.7.3 Member Data Documentation

#### 8.7.3.1 arc

`std::map<std::string, DisCosTiC\_Indextype> UserInterface::ChromeTraceViz::arc`

#### 8.7.3.2 filename

`std::string UserInterface::ChromeTraceViz::filename [private]`

## 8.8 DisCosTiC::CompModel Class Reference

```
#include <CompModel.hpp>
```

### Public Member Functions

- [CompModel](#) ([UserInterface::ConfigParser](#) \*CFG\_args, [UserInterface::YAMLParse](#) YAML\_args, int process\_Rank)  
*constructor that initializes the coordinates for unit\_converter, node and start time*

### Public Attributes

- [DisCosTiC\\_Datatype](#) node  
*core to execute on*
- [DisCosTiC\\_Timetype](#) start\_time  
*start time for this local operation*

### Private Attributes

- [DisCosTiC\\_Timetype](#) unit\_converter  
*multiplier - relative to microseconds*

## 8.8.1 Constructor & Destructor Documentation

### 8.8.1.1 CompModel()

```
DisCosTiC::CompModel::CompModel (
    UserInterface::ConfigParser * CFG_args,
    UserInterface::YAMLParse YAML_args,
    int process_Rank ) [inline]
```

constructor that initializes the coordinates for unit\_converter, node and start time

#### Parameters

|                              |          |
|------------------------------|----------|
| <code>_unit_converter</code> | and node |
|------------------------------|----------|

reading system properties

maximum performance for core-bound workloads

multiplication with cores

reading properties for memory-bound STREAM TRIAD benchmark

performance for memory-bound workloads due to transfer bottleneck performance in Flop/s with roofline model:  
 $\text{arithmetic intensity} = (\text{flops} / \text{bytes\_transfer}) * \text{bandwidth}$

< data at the missed-write location is not loaded to cache, and is written directly to the backing store

< data at the missed-write location is loaded to cache, followed by a write-hit operation

multiplication with `WA_factorHere` is the call graph for this function:

## 8.8.2 Member Data Documentation

### 8.8.2.1 node

`DisCosTiC_Datatype` `DisCosTiC::CompModel::node`

core to execute on

### 8.8.2.2 start\_time

`DisCosTiC_Timetype` `DisCosTiC::CompModel::start_time`

start time for this local operation

### 8.8.2.3 unit\_converter

`DisCosTiC_Timetype` `DisCosTiC::CompModel::unit_converter` [private]

multiplier - relative to microseconds

The documentation for this class was generated from the following file:

- `include/CompModel.hpp`

## 8.9 UserInterface::ConfigParser Class Reference

a wrapper class which contains functions for parsing the configuration file

```
#include <ConfigParser.hpp>
```

### Public Member Functions

- [ConfigParser](#) (const std::string &fileName)  
*a class to set the name of the configuration file and extracts and parses the data*
- bool [getKey](#) (const std::string &key) const  
*a function for finding the key*
- template<typename scalarT >  
scalarT [getValue](#) (const std::string &key, scalarT const &defaultValue=scalarT()) const  
*a function that retrieves the value of a specific key*

### Private Member Functions

- void [removeComment](#) (std::string &line) const  
*a function that removes everything from the semicolon (including it) to the end of the line.*
- bool [whitespace](#) (const std::string &line) const  
*a function that returns false if a non-space character was found, true otherwise. The function is "const" because it does not alter any class member variables.*
- void [extractKey](#) (std::string &key, [size\\_t](#) const &sepPos, const std::string &line) const  
*a function that extracts the key from the pair of key = value*
- void [extractValue](#) (std::string &value, [size\\_t](#) const &sepPos, const std::string &line) const  
*a function that extracts the value from the pair of key = value*
- void [parseLine](#) (const std::string &line, [size\\_t](#) const lineNum)  
*a function that parse the line by calling above mentioed functions*

### Private Attributes

- std::map< std::string, std::string > [data](#)  
*which will hold pairs of key-value*
- std::string [fileName](#)  
*As member variables, we will only have a std::string, which will hold the name of the configuration file.*

#### 8.9.1 Detailed Description

a wrapper class which contains functions for parsing the configuration file

#### 8.9.2 Constructor & Destructor Documentation

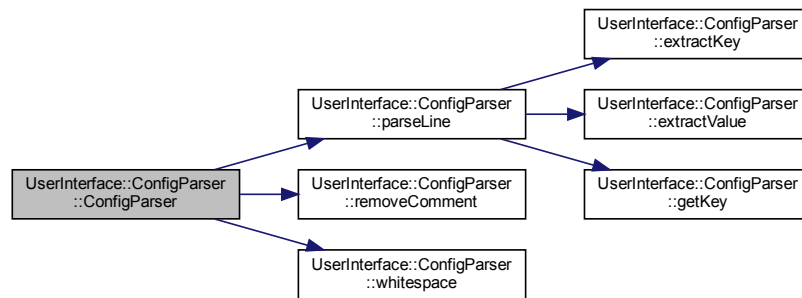

### 8.9.2.1 ConfigParser()

```
UserInterface::ConfigParser::ConfigParser (
    const std::string & fileName ) [inline]
```

a class to set the name of the configuration file and extracts and parses the data

Here is the call graph for this function:

## 8.9.3 Member Function Documentation

### 8.9.3.1 extractKey()

```
void UserInterface::ConfigParser::extractKey (
    std::string & key,
    size_t const & sepPos,
    const std::string & line ) const [inline], [private]
```

a function that extracts the key from the pair of key = value

### 8.9.3.2 extractValue()

```
void UserInterface::ConfigParser::extractValue (
    std::string & value,
    size_t const & sepPos,
    const std::string & line ) const [inline], [private]
```

a function that extracts the value from the pair of key = value

### 8.9.3.3 getKey()

```
bool UserInterface::ConfigParser::getKey (
    const std::string & key ) const [inline]
```

a function for finding the key

### 8.9.3.4 getValue()

```
template<typename scalarT >
scalarT UserInterface::ConfigParser::getValue (
    const std::string & key,
    scalarT const & defaultValue = scalarT() ) const [inline]
```

a function that retrieves the value of a specific key

Here is the call graph for this function:

### 8.9.3.5 parseLine()

```
void UserInterface::ConfigParser::parseLine (
    const std::string & line,
    size_t const lineNum ) [inline], [private]
```

a function that parse the line by calling above mentioed functions

Here is the call graph for this function:

### 8.9.3.6 removeComment()

```
void UserInterface::ConfigParser::removeComment (
    std::string & line ) const [inline], [private]
```

a function that removes everything from the semicolon (including it) to the end of the line.

### 8.9.3.7 whitespace()

```
bool UserInterface::ConfigParser::whitespace (
    const std::string & line ) const [inline], [private]
```

a function that returns false if a non-space character was found, true otherwise. The function is "const" because it does not alter any class member variables.

## 8.9.4 Member Data Documentation

### 8.9.4.1 data

```
std::map<std::string, std::string> UserInterface::ConfigParser::data [private]
```

which will hold pairs of key-value

### 8.9.4.2 fileName

```
std::string UserInterface::ConfigParser::fileName [private]
```

As member variables, we will only have a std::string, which will hold the name of the configuration file.

The documentation for this class was generated from the following file:

- [include/ConfigParser.hpp](#)

## 8.10 UserInterface::Conversion Class Reference

a wrapper class which contain function for the conversion of std::string to primitive types (int, float, double, etc.,)

```
#include <ConfigParser.hpp>
```

## Static Public Member Functions

- `template<typename T >`  
static T [stringTOScalarT](#) (std::string const &val)
- `template<typename T >`  
static std::vector< T > [stringTOArray](#) (std::string const &val)

### 8.10.1 Detailed Description

a wrapper class which contain function for the conversion of std::string to primitive types (int, float, double, etc..)

### 8.10.2 Member Function Documentation

#### 8.10.2.1 [stringTOArray\(\)](#)

```
template<typename T >
static std::vector<T> UserInterface::Conversion::stringTOArray (
    std::string const & val ) [inline], [static]
```

#### 8.10.2.2 [stringTOScalarT\(\)](#)

```
template<typename T >
static T UserInterface::Conversion::stringTOScalarT (
    std::string const & val ) [inline], [static]
```

The documentation for this class was generated from the following file:

- include/[ConfigParser.hpp](#)

### 8.16.1 Member Function Documentation

#### 8.16.1.1 getNumOps()

```
DisCosTiC\_Datatype DisCosTiC::Grid::getNumOps ( ) [inline]
```

default constructor

get the number of operations for each rank

### 8.16.1.2 getOp()

```
DisCosTiC::AST_OP_TYPE DisCosTiC::Grid::getOp (
    Benchmark benchmark,
    DisCosTiC::idNodeTypePair ID,
    DisCosTiC_Datatype rank,
    DisCosTiC_Datatype label ) [inline]
```

get the nodes

Here is the call graph for this function:

### 8.16.1.3 getSortedRootOps()

```
void DisCosTiC::Grid::getSortedRootOps (
    DisCosTiC::Operations & opVec ) [inline]
```

get the initial root operations ordered by their type for all ranks and time steps

### 8.16.1.4 getTypeSortedOps()

```
void DisCosTiC::Grid::getTypeSortedOps (
    DisCosTiC::Operations & opVec ) [inline]
```

get the all operations ordered by their type for all ranks and time steps

this is a sort operation that can be used to compare `DisCosTiC_OP` by type and sort them with respect with that respectHere is the call graph for this function:

### 8.16.1.5 setOp()

```
void DisCosTiC::Grid::setOp (
    DisCosTiC_Datatype rank,
    DisCosTiC_Datatype label,
    Benchmark benchmark,
    DisCosTiC::idNodeTypePair ID ) [inline]
```

set the operation, if started

Here is the call graph for this function:

### 8.16.1.6 unsetOp()

```
void DisCosTiC::Grid::unsetOp (
    DisCosTiC_Datatype rank,
    DisCosTiC_Datatype label,
    Benchmark benchmark,
    DisCosTiC::idNodeTypePair ID ) [inline]
```

un set the operation, if completed

Here is the call graph for this function:

### 8.17.1 Detailed Description

this class exposes all P graphVec and manages dependencies and execution order. It returns a list of executable operations and offers an interface to mark operations as executed.

### 8.17.2 Constructor & Destructor Documentation

#### 8.17.2.1 Grid\_Init()

```
DisCosTiC::Grid_Init::Grid_Init (
    DisCosTiC_Datatype num_ranks_,
    DisCosTiC_Datatype num_operations_,
    Benchmark benchmark,
    DisCosTiC::idNodeTypePair ID ) [inline]
```

constructor that initializes the variables.

#### Parameters

|               |           |
|---------------|-----------|
| <i>binary</i> | file name |
|---------------|-----------|

get root nodes of type [DisCosTiC::AST\\_OP\\_TYPE](#) (i.e., exec in our case ) and other info of all ranksHere is the call graph for this function:

#### 8.17.2.2 ~Grid\_Init()

```
DisCosTiC::Grid_Init::~Grid_Init ( ) [inline]
```

destructor

## 8.24 `UI::NetworkConfigParser` Class Reference

a wrapper class which contains functions for parsing the configuration file

```
#include <NetworkConfigParser.hpp>
```

### Public Member Functions

- [NetworkConfigParser](#) ()  
*a class to set the name of the configuration file and extracts and parses the data*
- [NetworkConfigParser](#) (const std::string &fileName)
- void [readData](#) (const std::string &fileName)
- void [setData](#) (const int buffersize)
- bool [getKey](#) (const std::string &key) const
- template<typename scalarT >  
scalarT [getValue](#) (const std::string &key, scalarT const &defaultValue=scalarT()) const  
*a function that retrieves the value of a specific key*

### Private Member Functions

- void [removeComment](#) (std::string &line) const  
*a function that removes everything from the semicolon (including it) to the end of the line.*
- bool [whitespace](#) (const std::string &line) const  
*a function that returns false if a non-space character was found, true otherwise. The function is "const" because it does not alter any class member variables.*
- void [parseLine](#) (const std::string &line, size\_t const lineNum)  
*a function that parse the line by calling above mentioed functions*

### Private Attributes

- int [dataCounter](#) = 0
- double [networkFileData](#) [400][8] = {0}
- std::map< std::string, std::string > [data](#)  
*which will hold pairs of key-value*
- std::string [fileName](#)  
*As member variables, we will only have a std::string, which will hold the name of the configuration file.*

#### 8.24.1 Detailed Description

a wrapper class which contains functions for parsing the configuration file

#### 8.24.2 Constructor & Destructor Documentation

### 8.24.2.1 NetworkConfigParser() [1/2]

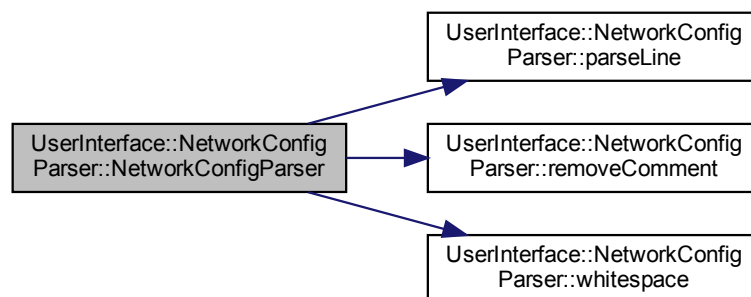

```
UserInterface::NetworkConfigParser::NetworkConfigParser ( ) [inline]
```

a class to set the name of the configuration file and extracts and parses the data

### 8.24.2.2 NetworkConfigParser() [2/2]

```
UserInterface::NetworkConfigParser::NetworkConfigParser (
    const std::string & fileName ) [inline]
```

Here is the call graph for this function:

## 8.24.3 Member Function Documentation

### 8.24.3.1 getKey()

```
bool UserInterface::NetworkConfigParser::getKey (
    const std::string & key ) const [inline]
```

### 8.24.3.2 getValue()

```
template<typename scalarT >
scalarT UserInterface::NetworkConfigParser::getValue (
    const std::string & key,
    scalarT const & defaultValue = scalarT() ) const [inline]
```

a function that retrieves the value of a specific key

Here is the call graph for this function:

### 8.24.3.3 parseLine()

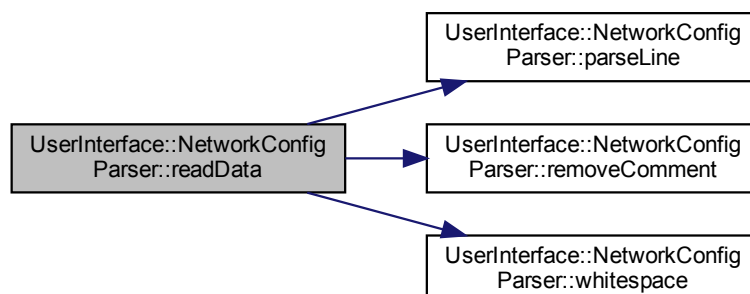

```
void UserInterface::NetworkConfigParser::parseLine (
    const std::string & line,
    size_t const lineNum ) [inline], [private]
```

a function that parse the line by calling above mentioed functions

### 8.24.3.4 readData()

```
void UserInterface::NetworkConfigParser::readData (
    const std::string & fileName ) [inline]
```

Here is the call graph for this function:

#### 8.24.3.5 removeComment()

```
void UserInterface::NetworkConfigParser::removeComment (
    std::string & line ) const [inline], [private]
```

a function that removes everything from the semicolon (including it) to the end of the line.

#### 8.24.3.6 setData()

```
void UserInterface::NetworkConfigParser::setData (
    const int buffersize ) [inline]
```

#### 8.24.3.7 whitespace()

```
bool UserInterface::NetworkConfigParser::whitespace (
    const std::string & line ) const [inline], [private]
```

a function that returns false if a non-space character was found, true otherwise. The function is "const" because it does not alter any class member variables.

### 8.24.4 Member Data Documentation

#### 8.24.4.1 data

```
std::map<std::string, std::string> UserInterface::NetworkConfigParser::data [private]
```

which will hold pairs of key-value

#### 8.24.4.2 dataCounter

```
int UserInterface::NetworkConfigParser::dataCounter = 0 [private]
```

#### 8.24.4.3 fileName

```
std::string UserInterface::NetworkConfigParser::fileName [private]
```

As member variables, we will only have a std::string, which will hold the name of the configuration file.

#### 8.24.4.4 networkFileData

```
double UserInterface::NetworkConfigParser::networkFileData[400][8] = {0} [private]
```

The documentation for this class was generated from the following file:

## 8.32.1 Constructor & Destructor Documentation

### 8.32.1.1 TimeRankOP()

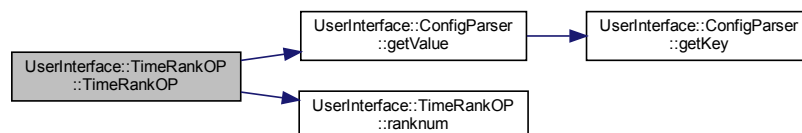

```
UserInterface::TimeRankOP::TimeRankOP (
    UserInterface::ConfigParser * args_info,
    DisCosTiC_Datatype rank,
    int totalrank ) [inline]
```

constructor that initializes the coordinates

Parameters

|                 |                     |
|-----------------|---------------------|
| <i>CFG_args</i> | and number of ranks |
|-----------------|---------------------|

Here is the call graph for this function:

### 8.32.1.2 ~TimeRankOP()

```
UserInterface::TimeRankOP::~~TimeRankOP ( ) [inline]
```

destructor

## 8.32.2 Member Function Documentation

### 8.32.2.1 comp()

```
void UserInterface::TimeRankOP::comp (
    DisCosTiC_Datatype rank,
    DisCosTiC_Datatype start,
    DisCosTiC_Datatype end,
    DisCosTiC_Datatype cpu,
    float r = 1.0,
    float g = 0.0,
    float b = 0.0 ) [inline]
```

print time taken by execution to output file

#### Parameters

|             |                                                               |
|-------------|---------------------------------------------------------------|
| <i>rank</i> | (process number), start (time), end (time), cpu (core number) |
|-------------|---------------------------------------------------------------|

### 8.32.2.2 file\_write()

```
void UserInterface::TimeRankOP::file_write (
    bool append ) [inline], [private]
```

print all events (i.e., osend, orecv, execution, msg transmission) to output file

#### Parameters

|               |  |
|---------------|--|
| <i>append</i> |  |
|---------------|--|

### 8.32.2.3 msg()

```
void UserInterface::TimeRankOP::msg (
    DisCosTiC_Datatype source,
    DisCosTiC_Datatype dest,
    DisCosTiC_Datatype starttime,
    DisCosTiC_Datatype endtime,
    DisCosTiC_Datatype size,
    DisCosTiC_Datatype G,
    float r = 0.0,
    float g = 0.0,
    float b = 1.0 ) [inline]
```

print time taken by message transmission to output file

#### Parameters

|             |                                                               |
|-------------|---------------------------------------------------------------|
| <i>rank</i> | (process number), start (time), end (time), cpu (core number) |
|-------------|---------------------------------------------------------------|

#### 8.32.2.4 orecv()

```
void UserInterface::TimeRankOP::orecv (
    DisCosTiC_Datatype rank,
    DisCosTiC_Datatype start,
    DisCosTiC_Datatype end,
    DisCosTiC_Datatype cpu,
    float r = 0.0,
    float g = 0.0,
    float b = 1.0 ) [inline]
```

print time taken by overhead at receiver side to output file

##### Parameters

|             |                                                               |
|-------------|---------------------------------------------------------------|
| <i>rank</i> | (process number), start (time), end (time), cpu (core number) |
|-------------|---------------------------------------------------------------|

#### 8.32.2.5 osend()

```
void UserInterface::TimeRankOP::osend (
    DisCosTiC_Datatype rank,
    DisCosTiC_Datatype start,
    DisCosTiC_Datatype end,
    DisCosTiC_Datatype cpu,
    float r = 0.0,
    float g = 0.0,
    float b = 1.0 ) [inline]
```

print time taken by overhead at sender side to output file

##### Parameters

|             |                                                               |
|-------------|---------------------------------------------------------------|
| <i>rank</i> | (process number), start (time), end (time), cpu (core number) |
|-------------|---------------------------------------------------------------|

#### 8.32.2.6 ranknum()

```
void UserInterface::TimeRankOP::ranknum (
    DisCosTiC_Datatype numranks ) [inline], [private]
```

print number of processes to output file

##### Parameters

|                 |                           |
|-----------------|---------------------------|
| <i>numranks</i> | (total number of process) |
|-----------------|---------------------------|

## 8.35 `DataType::vector3T< Tx, Ty, Tz >` Class Template Reference

a class to represent fixed-size three-dimensional vector data-type of arbitrary types with coefficients type, addr, size

```
#include <DataType.hpp>
```

### Public Member Functions

- [vector3T](#) ()  
*constructors*
- [vector3T](#) (const [vector3T](#) &elem)
- [vector3T](#) (Tx t, Ty a, Tz s)
- [vector3T](#) & [operator=](#) (const [vector3T](#) &elem)  
*a [operator=\(\)](#) member*

### Public Attributes

- Tx [type](#)  
*public variables type, addr, size in three-dimensional of integer and btime\_t datatype*
- Ty [addr](#)  
*actual address in memory where to read/write*
- Tz [size](#)  
*size of data to read/write (referenced by the address addr) in bytes*

### 8.35.1 Detailed Description

```
template<typename Tx, typename Ty, typename Tz>
class DataType::vector3T< Tx, Ty, Tz >
```

a class to represent fixed-size three-dimensional vector data-type of arbitrary types with coefficients type, addr, size

## 8.35.2 Constructor & Destructor Documentation

### 8.35.2.1 `vector3T()` [1/3]

```
template<typename Tx , typename Ty , typename Tz >
DataType::vector3T< Tx, Ty, Tz >::vector3T ( ) [inline]
```

constructors

### 8.35.2.2 `vector3T()` [2/3]

```
template<typename Tx , typename Ty , typename Tz >
DataType::vector3T< Tx, Ty, Tz >::vector3T (
    const vector3T< Tx, Ty, Tz > & elem ) [inline]
```

### 8.35.2.3 `vector3T()` [3/3]

```
template<typename Tx , typename Ty , typename Tz >
DataType::vector3T< Tx, Ty, Tz >::vector3T (
    Tx t,
    Ty a,
    Tz s ) [inline]
```

## 8.35.3 Member Function Documentation

### 8.35.3.1 `operator=()`

```
template<typename Tx , typename Ty , typename Tz >
vector3T& DataType::vector3T< Tx, Ty, Tz >::operator= (
    const vector3T< Tx, Ty, Tz > & elem ) [inline]
```

a `operator=()` member

Parameters

|          |                  |
|----------|------------------|
| <i>o</i> | of type scalarT. |
|----------|------------------|

## 8.35.4 Member Data Documentation

### 8.35.4.1 addr

```
template<typename Tx , typename Ty , typename Tz >  
Ty DataType::vector3T< Tx, Ty, Tz >::addr
```

actual address in memory where to read/write

### 8.35.4.2 size

```
template<typename Tx , typename Ty , typename Tz >  
Tz DataType::vector3T< Tx, Ty, Tz >::size
```

size of data to read/write (referenced by the address addr) in bytes

### 8.35.4.3 type

```
template<typename Tx , typename Ty , typename Tz >  
Tx DataType::vector3T< Tx, Ty, Tz >::type
```

public variables type, addr, size in three-dimensional of integer and btime\_t datatype

type, which can be IN=1 or OUT=2 indicated by a '<' or '>' in the schedule

## Public Member Functions

- void [removeComment](#) (std::string &line) const  
*a function that removes everything from the semicolon (including it) to the end of the line.*
- bool [whitespace](#) (const std::string &line) const  
*a function that returns false if a non-space character was found, true otherwise. The function is "const" because it does not alter any class member variables.*
- void [parseLine](#) (const std::string &line, [size\\_t](#) const lineNum)  
*a function that extracts the key from the pair of key = value*
- [YAMLParser](#) (const std::string &fileName)  
*a class to set the name of the configuration file and extracts and parses the data*

## Public Attributes

- std::map< std::string, std::string > [data](#)  
*which will hold pairs of key-value*
- std::string [fileName](#)  
*As member variables, we will only have a std::string, which will hold the name of the configuration file.*
- std::string [micro\\_architecture](#)
- [DisCosTiC\\_Datatype](#) [FP\\_instructions\\_per\\_cycle](#)
- [DisCosTiC\\_Datatype](#) [FP\\_ops\\_per\\_instruction\\_SP](#)
- [DisCosTiC\\_Datatype](#) [FP\\_ops\\_per\\_instruction\\_DP](#)
- [real\\_t](#) [clk\\_freq\\_in\\_GHz](#)
- [DisCosTiC\\_Datatype](#) [cores\\_per\\_chip](#)
- [DisCosTiC\\_Datatype](#) [chips\\_per\\_node](#)
- [DisCosTiC\\_Datatype](#) [cores\\_per\\_numa\\_domain](#)
- std::vector< [real\\_t](#) > [MEM\\_bandwidth](#)
- bool [flag](#)

### 8.37.1 Constructor & Destructor Documentation

#### 8.37.1.1 [YAMLParser\(\)](#)

```
UserInterface::YAMLParser::YAMLParser (
    const std::string & fileName ) [inline]
```

a class to set the name of the configuration file and extracts and parses the data

Here is the call graph for this function:

## 8.37.2 Member Function Documentation

### 8.37.2.1 parseLine()

```
void UserInterface::YAMLParse::parseLine (
    const std::string & line,
    size_t const lineNum ) [inline]
```

a function that extracts the key from the pair of key = value

a function that parse the line by calling above mentioed functions

### 8.37.2.2 removeComment()

```
void UserInterface::YAMLParse::removeComment (
    std::string & line ) const [inline]
```

a function that removes everything from the semicolon (including it) to the end of the line.

### 8.37.2.3 whitespace()

```
bool UserInterface::YAMLParse::whitespace (
    const std::string & line ) const [inline]
```

a function that returns false if a non-space character was found, true otherwise. The function is "const" because it does not alter any class member variables.

### 8.37.3 Member Data Documentation

#### 8.37.3.1 chips\_per\_node

`DisCosTiC_Datatype` `UserInterface::YAMLParse::chips_per_node`

#### 8.37.3.2 clk\_freq\_in\_GHz

`real_t` `UserInterface::YAMLParse::clk_freq_in_GHz`

#### 8.37.3.3 cores\_per\_chip

`DisCosTiC_Datatype` `UserInterface::YAMLParse::cores_per_chip`

#### 8.37.3.4 cores\_per\_numa\_domain

`DisCosTiC_Datatype` `UserInterface::YAMLParse::cores_per_numa_domain`

#### 8.37.3.5 data

`std::map<std::string, std::string>` `UserInterface::YAMLParse::data`

which will hold pairs of key-value

#### 8.37.3.6 fileName

`std::string` `UserInterface::YAMLParse::fileName`

As member variables, we will only have a `std::string`, which will hold the name of the configuration file.

### 8.37.3.7 flag

`bool UserInterface::YAMLParse::flag`

### 8.37.3.8 FP\_instructions\_per\_cycle

`DisCosTiC_Datatype UserInterface::YAMLParse::FP_instructions_per_cycle`

### 8.37.3.9 FP\_ops\_per\_instruction\_DP

`DisCosTiC_Datatype UserInterface::YAMLParse::FP_ops_per_instruction_DP`

### 8.37.3.10 FP\_ops\_per\_instruction\_SP

`DisCosTiC_Datatype UserInterface::YAMLParse::FP_ops_per_instruction_SP`

### 8.37.3.11 MEM\_bandwidth

`std::vector<real_t> UserInterface::YAMLParse::MEM_bandwidth`

### 8.37.3.12 micro\_architecture

`std::string UserInterface::YAMLParse::micro_architecture`

The documentation for this class was generated from the following file:

- `include/YAMLParse.hpp`

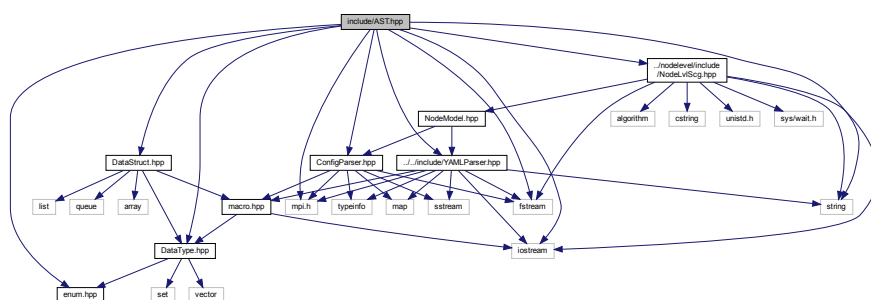

## Chapter 9

# File Documentation

### 9.1 Doxyfile File Reference

### 9.2 include/AST.hpp File Reference

```
#include <iostream>

```

## 9.7 include/enum.hpp File Reference

This graph shows which files directly or indirectly include this file:

## Namespaces

- [DisCosTiC](#)
  - < benchmark test cases

## Enumerations

- enum `DisCosTiC::Operation_t` { `DisCosTiC::SEND` = 1, `DisCosTiC::RECV` = 2, `DisCosTiC::COMP` = 3, `DisCosTiC::MSG` = 4 }

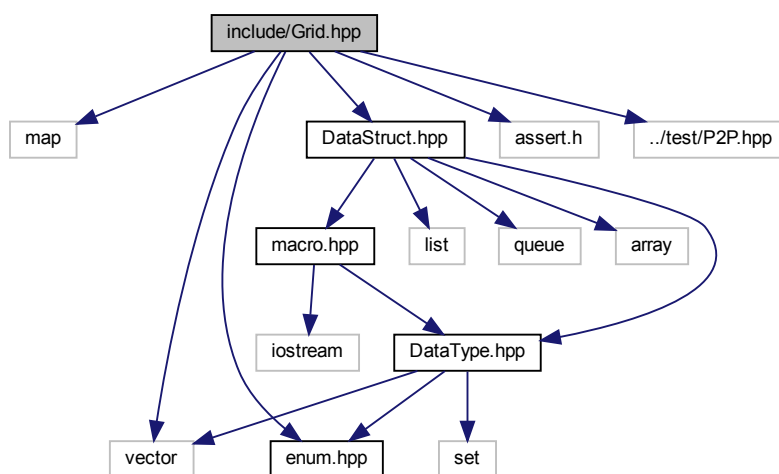

The `Operation_t` enum defines different operation types of entities.

- enum `DisCosTiC::Mode_t` { `DisCosTiC::NONBLOCKING`, `DisCosTiC::BLOCKING` }

The `Mode_t` enum defines operation type of `SEND` and `RECV` entities (i.e., either blocking calls that return only on completion of operation or non-blocking calls that return with start of operation)

## 9.8 include/Grid.hpp File Reference

### 9.10.1 Macro Definition Documentation

### 9.10.1.1 allRanksTime

```
#define allRanksTime(
    numRanks,
    nexto )
```

#### Value:

```
std::cout << "\n-----" << std::endl;
std::cout << "FULL APPLICATION PERFORMANCE (for all MPI processes)" << std::endl;
std::cout << "rank                runtime [s]" << std::endl;
std::cout << "-----" << std::endl;
for (auto rank : DisCosTiC::getRange(numRanks))
{
    DisCosTiC_Timetype maxo = *(std::max_element(nexto[rank].begin(), nexto[rank].end()));
    std::cout << rank << "                " << maxo / 1e9 << std::endl;
}
std::cout << "-----" << std::endl;
```

print final time for all ranks

### 9.10.1.2 AppendString

```
#define AppendString(
    str,
    content )
```

#### Value:

```
{
    this->content.append(str);
}
```

append a string

#### Parameters

|               |  |
|---------------|--|
| <i>string</i> |  |
|---------------|--|

### 9.10.1.3 fclose

```
#define fclose(
    myfile,
    filename )
```

#### Value:

```
{
    if (myfile.is_open())
    {
        try
        {
            myfile.close();
        }
    }
}
```

```

    } \
    catch (std::ofstream::failure const &e) \
    { \
        std::cerr << "error: closing file definition of " << this->filename << " for writing" << \
        std::endl; \
        std::exit(EXIT_FAILURE); \
    } \
} \
}

```

close an open file

#### 9.10.1.4 fileopen

```

#define fileopen(
    myfile,
    filename )

```

**Value:**

```

{
    try
    {
        myfile.open(filename);
    }
    catch (std::ifstream::failure const &e)
    {
        std::cerr << "error: opening file definition of "
                    << this->filename << " for reading, with message '"
                    << e.what() << std::endl;
        std::exit(EXIT_FAILURE);
    }
}

```

open an open file

#### 9.10.1.5 help

```

#define help( )

```

#### 9.10.1.6 iqueueOpecond\_Vec2T

```

#define iqueueOpecond_Vec2T(
    vec )

```

**Value:**

```

{
    for (auto &row : vec) \
    { \
        for (auto &col : row) \
            col.second; \
    } \
}

```

## 9.10.1.7 itFirst\_Vec2T

```
#define itFirst_Vec2T(
    vec )
```

**Value:**

```
{
    for (auto &row : vec)
    {
        for (auto &col : row)
            std::cout << col.first << std::endl; \
    }
}
```

## 9.10.1.8 max\_vec1T

```
#define max_vec1T(
    vec )
```

**Value:**

```
{
    DisCosTiC_Datatype max = 0;
    for (auto i : DisCosTiC::getRange(vec.size()))
        max = std::max(max, vec[i].size());
    std::cout << max;
}
```

find max value of a vector

## 9.10.1.9 print\_AST\_OP\_NonPointerT

```
#define print_AST_OP_NonPointerT(
    op )
```

**Value:**

```
{
    std::cout << "num_deps: " << op.num_deps
              << " deps_startlabel_in_apdx: " << op.deps_startlabel_in_apdx
              << " num_startdeps.bufSize(): " << op.num_startdeps
              << " startdeps_startlabel_in_apdx: " << op.startdeps_startlabel_in_apdx
              << " depCount: " << op.depCount
              << " target: " << op.target
              << " label: " << op.label
              << " tag: " << op.tag
              << " node: " << +op.node
              << " network: " << +op.network
              << " type: " << +op.type
              << " bufSize: " << op.bufSize
              << std::endl;
}
```

### 9.10.1.10 print\_DeserialNodeNonPointerT

```
#define print_DeserialNodeNonPointerT(
    op )
```

#### Value:

```
{
    std::cout << "DepOperations.size(): " << op.DepOperations.size() //
               << " IdepOperations.size(): " << op.IdepOperations.size() //
               << " depCount: " << op.depCount //
               << " target: " << op.target //
               << " label: " << op.label //
               << " tag: " << op.tag //
               << " node: " << +op.node //
               << " network: " << +op.network //
               << " type: " << +op.type //
               << " bufSize: " << op.bufSize //
               << std::endl;
}
```

### 9.10.1.11 print\_DeserialNodeT

```
#define print_DeserialNodeT(
    op )
```

#### Value:

```
{
    std::cout << "DepOperations: " << op->DepOperations.size() //
               << " IdepOperations: " << op->IdepOperations.size() //
               << " depCount: " << op->depCount //
               << " target: " << op->target //
               << " label: " << op->label //
               << " tag: " << op->tag //
               << " node: " << +op->node //
               << " network: " << +op->network //
               << " type: " << +op->type //
               << " bufSize: " << op->bufSize //
               << std::endl;
}
```

### 9.10.1.12 print\_OpPropertiesNonPointerT

```
#define print_OpPropertiesNonPointerT(
    op )
```

#### Value:

```
{
    std::cout << " rank: " << op.rank //
               << " time: " << op.time //
               << " starttime: " << op.starttime //
               << " syncstart: " << op.syncstart //
               << " numOpsInQueue: " << op.numOpsInQueue //
               << " bufSize: " << op.bufSize //
               << " target: " << op.target << " label: " << op.label //
               << " tag: " << op.tag //
               << " node: " << +op.node //
               << " network: " << +op.network //
               << " type: " << +op.type //
               << " mode : " << +op.mode << std::endl;
}
```

## 9.10.1.13 print\_OpPropertiesT

```
#define print_OpPropertiesT(
    op )
```

## Value:

```
{
    std::cout << "time: " << op->time
               << " starttime: " << op->starttime
               << " syncstart: " << op->syncstart
               << " numOpsInQueue: " << op->numOpsInQueue
               << " bufSize: " << op->bufSize
               << " target: " << op->target
               << " rank: " << op->rank
               << " label: " << op->label
               << " tag: " << op->tag
               << " node: " << +op->node
               << " network: " << +op->network
               << " type: " << +op->type << std::endl;
}
```

## 9.10.1.14 print\_pairedVec2T

```
#define print_pairedVec2T(
    vec )
```

## Value:

```
{
    for (auto i : DisCosTiC::getRange(vec.size()))
    {
        for (auto j : DisCosTiC::getRange(vec[i].size()))
        {
            std::cout << "[" << i << "]"[" << j << "]:"
                      << "\t label = " << vec[i][j].first << "\t AST_OP info : ";
            print_DeserialNodeT(+vec[i][j].second);
        }
    }
}
```

## 9.10.1.15 print\_pairedVec\_NonPointer2T

```
#define print_pairedVec_NonPointer2T(
    vec )
```

## Value:

```
{
    for (auto i : DisCosTiC::getRange(vec.size()))
    {
        for (auto j : DisCosTiC::getRange(vec[i].size()))
        {
            std::cout << "[" << i << "]"[" << j << "]:"
                      << "\t label = " << vec[i][j].first << "\t AST_OP info : ";
            print_AST_OP_NonPointerT(+vec[i][j].second);
        }
    }
}
```

**9.10.1.16 print\_pairedVecNonPointer2T**

```
#define print_pairedVecNonPointer2T(
    vec )
```

**Value:**

```
{
    for (auto i : DisCosTiC::getRange(vec.size()))
        for (auto j : DisCosTiC::getRange(vec[i].size()))
            std::cout << "[" << i << "]"[" << j << "]:"
                << "\t label = " << vec[i][j].first << "\t AST_OP info : "; \
print_DeserialNodeNonPointerT(+vec[i][j].second);
}
}
```

**9.10.1.17 print\_vec1T**

```
#define print_vec1T(
    vec )
```

**Value:**

```
{
    std::cout << "{";
    for (auto i : DisCosTiC::getRange(vec.size()))
        std::cout << (i ? " , " : "") << vec[i];
    std::cout << " }" << std::endl;
}
```

**9.10.1.18 print\_vec2T**

```
#define print_vec2T(
    vec )
```

**Value:**

```
{
    for (auto i : DisCosTiC::getRange(vec[0].size()))
    {
        for (auto j : DisCosTiC::getRange(vec[i].size()))
        {
            std::cout << "[" << i << "]"[" << j << "]= " << vec[i][j] << std::endl; \
        }
    }
}
```

**9.10.1.19 print\_vec3T**

```
#define print_vec3T(
    vec )
```

**Value:**

```
{
    for (auto i : DisCosTiC::getRange(vec[0].size()))
    {
        for (auto j : DisCosTiC::getRange(vec[i].size()))
        {
            for (auto k : DisCosTiC::getRange(vec[j].size()))
            {
                std::cout << "[" << i << "]"[" << j << "]"[" << k << "]= " << vec[i][j][k] << std::endl; \
            }
        }
    }
}
```

## 9.10.1.20 progressPrint

```
#define progressPrint(
    progress,
    qCounter,
    q1,
    q2,
    q3 )
```

## Value:

```
{
    std::cout << "Discostic Progress: " << progress
               << " % (queue counter: " << qCounter << ") ";
    std::cout << "[Queue bufSize: " << q1.size() << " Max Receive Queue bufSize: ";
    max_vec1T(q2);
    std::cout << " Max Unexpected Message Queue bufSize: ";
    max_vec1T(q3);
    std::cout << "]" << std::endl;
}
```

print progress

## 9.10.1.21 queues\_empty\_check

```
#define queues_empty_check(
    check,
    q )
```

## Value:

```
for (auto rank : DisCosTiC::getRange(numRanks))
{
    if (!q[rank].empty())
    {
        std::cerr << " queue on rank " << rank
                  << " contains " << q[rank].size()
                  << " operations!";
        for (DisCosTiC::ListqueueOp::iterator iter = q[rank].begin(); iter != q[rank].end(); ++iter)
            std::cerr << "\t [ source ==> " << iter->src
                      << ", tag ==> " << iter->tag
                      << "]" << std::endl;
        check = false;
    }
}
```

check if all queues are empty

end of for loop

## 9.10.1.22 slowRankTime

```
#define slowRankTime(
    numRanks,
    nexto )
```

## Value:

```
std::cout << "\nFULL APPLICATION PERFORMANCE (for slowest rank):" << std::endl;
DisCosTiC_Timetype max = 0;
DisCosTiC_Datatype rank = 0;
for (auto rank : DisCosTiC::getRange(numRanks))
{
    DisCosTiC_Timetype maxo = *(std::max_element(nexto[rank].begin(), nexto[rank].end()));
    DisCosTiC_Timetype cur = maxo;
    if (cur > max)
```

```

        {
            rank = rank;
            max = cur;
        }
    }
    std::cout << "-----" << std::endl; \
    std::cout << "rank          runtime [ns]          runtime [s]" << std::endl; \
    std::cout << "-----" << std::endl; \
    std::cout << rank << " \t\t " << max << " \t\t " << max / 1e9 << std::endl;

```

print final maximum time for only rank taking maximum time

### 9.10.1.23 toCharPointer

```

#define toCharPointer(
    content )

```

#### Value:

```

{
    const_cast<char *>(("l" + std::to_string(content)).c_str()) \
}

```

append content to a string with label l

#### Parameters

|                            |  |
|----------------------------|--|
| <i>DisCosTiC_Indextype</i> |  |
|----------------------------|--|

### 9.10.1.24 verboseCompFinalPrint

```

#define verboseCompFinalPrint(
    rank,
    operation )

```

#### Value:

```

std::cout << "rank: " << rank \
<< " [ node: " << +operation.node \
<< ", network: " << +operation.network \
<< "] computation: " << operation.bufSize \
<< ", time: " << operation.time \
<< ", label: " << operation.label << std::endl;

```

### 9.10.1.25 verboseCompInitPrint

```

#define verboseCompInitPrint(
    rank,
    operation )

```

#### Value:

```

std::cout << "initialize rank: " << rank \
<< " [ node: " << +operation.node \
<< ", network: " << +operation.network \
<< "] computation: " << operation.bufSize << std::endl;

```

print verbose output for computational phases

**9.10.1.26 verboseCompPrint**

```
#define verboseCompPrint(  
    operation )
```

**Value:**

```
{  
    std::cout << "\n[rank: " << operation.rank  
               << ", node: " << +operation.node  
               << "]" << std::endl;  
    std::cout << "local operation bufSize= " << operation.bufSize  
               << " ns, total time= " << operation.time  
               << " ns" << std::endl;  
}
```

**9.10.1.27 verboseEagerSendPrint**

```
#define verboseEagerSendPrint(  
    o,  
    operation )
```

**Value:**

```
std::cout << "eager satisfy local requires at total time = " << operation.starttime + o  
          << " ns" << std::endl;
```

**9.10.1.28 verboseMsgPrint**

```
#define verboseMsgPrint(  
    operation,  
    oSuccessor,  
    grSuccessor )
```

**Value:**

```
{  
    std::cout << "\n[rank: " << operation.rank  
               << ", node: " << +operation.node  
               << "]" << std::endl;  
    std::cout << "receive msg from rank " << operation.target  
               << ", total time= " << operation.time  
               << " ns" << std::endl;  
    std::cout << "o= " << oSuccessor[operation.rank][operation.node]  
               << " ns, successor gr= " << grSuccessor[operation.rank][operation.network]  
               << " ns" << std::endl;  
}
```

**9.10.1.29 verboseRecvFinalPrint**

```
#define verboseRecvFinalPrint(  
    rank,  
    operation )
```

**Value:**

```
std::cout << "rank: " << rank  
          << " [ node: " << +operation.node  
          << ", network: " << +operation.network  
          << "] receive from: " << operation.target  
          << ", tag: " << operation.tag  
          << ", bufSize: " << operation.bufSize  
          << ", time: " << operation.time  
          << ", label: " << operation.label << std::endl;
```

**9.10.1.30 verboseRecvInitPrint**

```
#define verboseRecvInitPrint(
    rank,
    operation )
```

**Value:**

```
std::cout << "initialize rank: " << rank \
<< " [ node: " << +operation.node \
<< ", network: " << +operation.network \
<< "] receive from: " << operation.target \
<< "tag: " << operation.tag \
<< " bufSize: " << operation.bufSize << std::endl;
```

**9.10.1.31 verboseRecvPrint**

```
#define verboseRecvPrint(
    operation )
```

**Value:**

```
{
    std::cout << "\n[rank: " << operation.rank \
<< ", node: " << +operation.node \
<< "]: " << std::endl;
    std::cout << "receive from rank " << operation.target \
<< ", total time= " << operation.time \
<< " ns" << std::endl;
}
```

**9.10.1.32 verboseRendezvousRecvPrint**

```
#define verboseRendezvousRecvPrint(
    operation )
```

**Value:**

```
std::cout << "satisfy remote requires at rank " << operation.target \
<< " (label: " << operation.label \
<< ")" << std::endl;
```

**9.10.1.33 verboseRendezvousSendPrint**

```
#define verboseRendezvousSendPrint(
    operation )
```

**Value:**

```
std::cout << "start rendezvous message to: " << operation.rank \
<< " (label: " << operation.label \
<< ")" << std::endl;
```

**9.10.1.34 verboseSendFinalPrint**

```
#define verboseSendFinalPrint(
    rank,
    operation )
```

**Value:**

```
std::cout << "rank: " << rank \
<< " [ node: " << +operation.node \
<< ", network: " << +operation.network \
<< "] send to: " << operation.target \
<< ", tag: " << operation.tag \
<< ", bufSize: " << operation.bufSize \
<< ", time: " << operation.time \
<< ", label: " << operation.label << std::endl;
```

**9.10.1.35 verboseSendInitPrint**

```
#define verboseSendInitPrint(
    rank,
    operation )
```

**Value:**

```
std::cout << "initialize rank: " << rank \
<< " [ node: " << +operation.node \
<< ", network: " << +operation.network \
<< "] send to: " << operation.target \
<< "tag: " << operation.tag \
<< " bufSize: " << operation.bufSize << std::endl;
```

**9.10.1.36 verboseSendIrequiresPrint**

```
#define verboseSendIrequiresPrint(
    operation )
```

**Value:**

```
{
    std::cout << "satisfy local non-blocking dependencies" << std::endl; \
    std::cout << "send inserting msg to rank " << operation.rank \
    << ", total time= " << operation.time << " ns" << std::endl; \
}
```

**9.10.1.37 verboseSendPrint**

```
#define verboseSendPrint(
    operation )
```

**Value:**

```
{
    std::cout << "\n[rack: " << operation.rank \
    << ", node: " << +operation.node \
    << "]: " << std::endl; \
    std::cout << "send to rank " << operation.target \
    << ", total time= " << operation.time \
    << " ns" << std::endl; \
}
```

### 9.10.1.38 version

```
#define version( )
```

#### Value:

```
{
    std::cout << "\nDistributed Cost in Cluster (DisCostiC)" << std::endl;
    std::cout << "Version : v1.0.0" << std::endl;
    std::cout << "Author : Ayesha Afzal <ayesha.afzal@fau.de>" << std::endl;
    std::cout << "Copyright : 2024 HPC, FAU Erlangen-Nuremberg. All rights reserved" << std::endl;
}
```

```
end P2P_HPP
```

## 9.43.1 Macro Definition Documentation

### 9.43.1.1 USE\_CHROMEVIZ

```
#define USE_CHROMEVIZ
```

## 9.43.2 Enumeration Type Documentation

### 9.43.2.1 bound\_type

```
enum bound_type
```

Enumerator

|         |  |
|---------|--|
| COMPUTE |  |
| MEMORY  |  |
| COMPUTE |  |
| MEMORY  |  |

### 9.43.2.2 communication\_mode

```
enum communication_mode
```

Enumerator

|          |  |
|----------|--|
| LOGGP    |  |
| SIMPLELB |  |

### 9.43.2.3 communication\_type

enum `communication_type`

#### Enumerator

|              |  |
|--------------|--|
| INTRACHIP    |  |
| INTERCHIP    |  |
| INTERNODE    |  |
| INTERCLUSTER |  |

### 9.43.2.4 time

enum `time`

#### Enumerator

|       |  |
|-------|--|
| START |  |
| END   |  |

## 9.43.3 Function Documentation

### 9.43.3.1 copy()

```
DisCosTiC::DisCosTiC_OP copy (
    DisCosTiC::DisCosTiC_OP op Og,
    DisCosTiC::DisCosTiC_OP op Copy )
```

### 9.43.3.2 finalize()

```
double* finalize (
    double a,
    double b,
    double c,
    double d,
    double e,
    double arr[5] )
```

**9.43.3.3 main()**

```
int main (
    int argc,
    char ** argv )
```

< print version number of toolkit

< print current date and time

< generate [AST](#) for Oneway\_PositiveDisplacement communication pattern example

rootGrabber: get root nodes of [DisCosTiC::AST\\_OP\\_TYPE](#) type (i.e., exec in our case ) of all ranks

it parses and print user-defined parameters or args of configuration file (config.cfg).

< number of synchronization induced by MPI routines

define and initialize next available time of computation, receive and send for all CPU nodes and ranks

initialize root operations for each rank (only once per run!). These sorted operations order by type retrieve from test case application added to the queue (that has operations of all processes and their earliest start times). (each operation = time, rank, next operation).

Start of parallelization code runs for all processes that are not the master rank

the switch on type of each operation: whenever a blocking or non-blocking dependency or something is satisfied, the rank is added to the list of ranks that completed something (finishedRankList)

operations of all ranks with their starting times and counter over operation statuses

< get rid of baseline comp time

< get rid of baseline comp time and add original computing time modeled by analytical roofline model

injected long disturbance at given rank and given timestep

< message is only received after G is charged

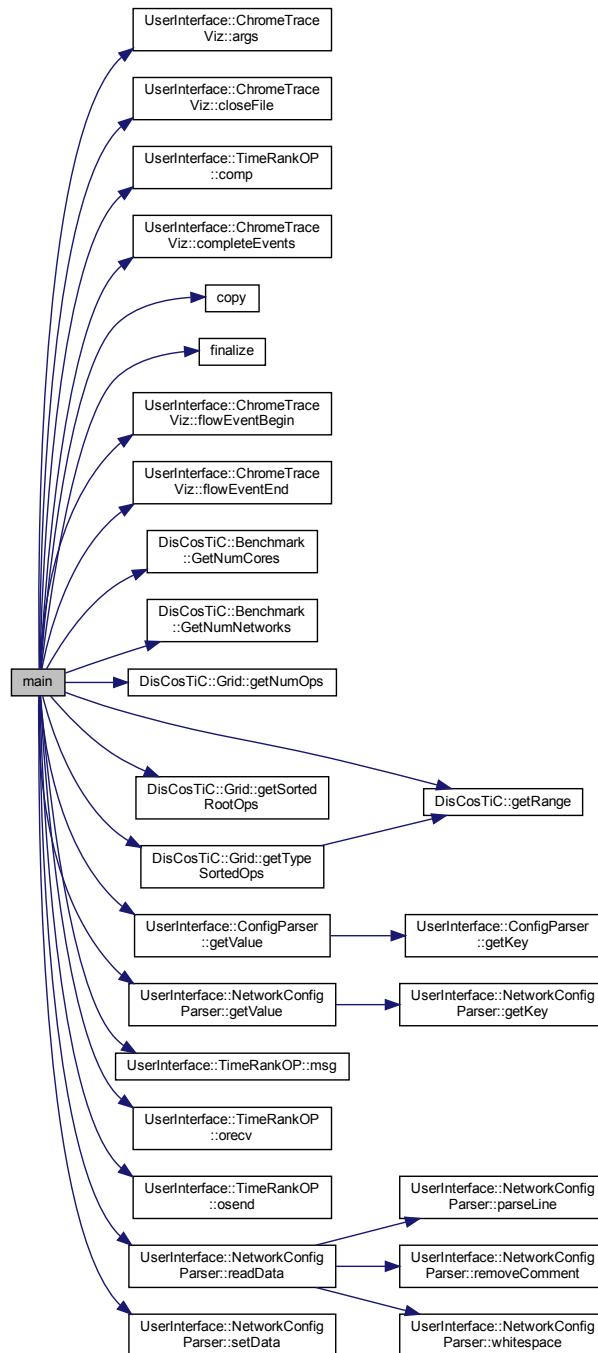

satisfy remote requires

set the remote clocks to operation.time (there is no event < operation.time in the queue)

add new sorted operations order by type to the queue

Start of Master Ranks code runs for the master rank

end of parallelizationHere is the call graph for this function:

## 9.48.1 Macro Definition Documentation

### 9.48.1.1 `_GNU_SOURCE`

```
#define _GNU_SOURCE
```

## 9.48.2 Function Documentation

### 9.48.2.1 `deinit()`

```
static void deinit (
    struct domain_t * domain ) [static]
```

Deinitialize and free resources associated with `domain`.

## Parameters

|               |                     |
|---------------|---------------------|
| <i>domain</i> | The domain to free. |
|---------------|---------------------|

### 9.48.2.2 dump\_domain()

```
static void dump_domain (
    struct domain_t * domain ) [static]
```

Collective routine that writes the domain as a PGM file.

Simple implementation for writing the domain as PGM file. No MPI communication or IO is involved.

## Parameters

|               |                     |
|---------------|---------------------|
| <i>domain</i> | The domain to dump. |
|---------------|---------------------|

### 9.48.2.3 exchange()

```
static void exchange (
    struct domain_t * domain,
    int grid_idx ) [static]
```

Exchange ghost cells.

## Parameters

|                 |                            |
|-----------------|----------------------------|
| <i>domain</i>   | The domain to use.         |
| <i>grid_idx</i> | The grid in domain to use. |

### 9.48.2.4 init()

```
struct domain_t* init (
    int argc,
    char * argv[],
    int rank,
    int size )
```

Allocate and initialize domain and grids. Aborts on error.

## Parameters

|             |  |
|-------------|--|
| <i>argc</i> |  |
|-------------|--|

**Parameters**

|             |                                                     |
|-------------|-----------------------------------------------------|
| <i>argv</i> |                                                     |
| <i>rank</i> | The rank the current MPI process in MPI_COMM_WORLD. |
| <i>size</i> | The size of MPI_COMM_WORLD.                         |

**Returns**

an initialized domain or stopps execution on error.

Here is the call graph for this function:

**9.48.2.5 init\_grid\_data()**

```
static void init_grid_data (
    struct domain_t * domain,
    int grid_idx ) [static]
```

Initialize grid @grid\_idx in domain.

**Parameters**

|                 |                                     |
|-----------------|-------------------------------------|
| <i>domain</i>   | The domain that contains the grids. |
| <i>grid_idx</i> | The grid in domain to initialize.   |

**9.48.2.6 iterate()**

```
static double iterate (
    struct domain_t * domain ) [static]
```

Perform a fixed amount of iterations over given domain.

## Parameters

|               |                             |
|---------------|-----------------------------|
| <i>domain</i> | The domain to iterate over. |
|---------------|-----------------------------|

A single iteration consists of a ghost cell exchange and a relaxation step. The `active_grid` and `iterations_performed` member of `domain` will be updated upon return. Here is the call graph for this function:

## 9.48.2.7 main()

```
int main (  
    int argc,  
    char * argv[] )
```

Here is the call graph for this function:

#### 9.48.2.8 max\_int()

```
static int max_int (
    int a,
    int b ) [static]
```

#### 9.48.2.9 relax()

```
static void relax (
    struct domain_t * domain,
    int src_grid_idx,
    int dst_grid_idx ) [static]
```

Perform one sweep over the domain.

##### Parameters

|                     |                                   |
|---------------------|-----------------------------------|
| <i>domain</i>       | The domain to use.                |
| <i>src_grid_idx</i> | Source grid index in domain.      |
| <i>dst_grid_idx</i> | Destination grid index in domain. |

### 9.48.3 Variable Documentation

#### 9.48.3.1 V\_BOTTOM

```
const double V_BOTTOM = 3.0
```

#### 9.48.3.2 V\_DEFAULT

```
const double V_DEFAULT = 0.1
```

## 9.50.1 Function Documentation

### 9.50.1.1 `assert()` [1/7]

```
assert (
    localNumberOfRows ,
    0 )
```

### 9.50.1.2 `assert()` [2/7]

```
assert (
    nxf% 2 == 0 )
```

#### 9.50.1.3 `assert()` [3/7]

```
assert (
    nyf% 2 == 0 )
```

#### 9.50.1.4 `assert()` [4/7]

```
assert (
    nzf% 2 == 0 )
```

#### 9.50.1.5 `assert()` [5/7]

```
int ComputeSPMV_ref assert (
    x.localLength >= A.localNumberOfColumns )
```

#### 9.50.1.6 `assert()` [6/7]

```
int ComputeMG_ref assert (
    x.localLength == A.localNumberOfColumns )
```

#### 9.50.1.7 `assert()` [7/7]

```
assert (
    y.localLength >= A.localNumberOfRows )
```

#### 9.50.1.8 `ExchangeHalo()`

```
ExchangeHalo (
    A ,
    x )
```

### 9.50.1.9 for()

```
for ( )
```

Here is the call graph for this function:

### 9.50.1.10 GenerateGeometry()

```

GenerateGeometry (
    Af.geom-> size,
    Af.geom-> rank,
    Af.geom-> numThreads,
    Af.geom-> pz,
    zlc ,
    zuc ,
    nxc ,
    nyc ,
    nzc ,
    Af.geom-> npx,
    Af.geom-> npy,
    Af.geom-> npz,
    geomc )

```

### 9.50.1.11 if() [1/6]

```

if (
    A.mgData!    = 0 )

```

**9.50.1.12 if()** [2/6]

```
if (
    b!      = 0 )
```

Here is the call graph for this function:

**9.50.1.13 if()** [3/6]

```
if (
    ierr!      = 0 )
```

**9.50.1.14 if()** [4/6]

```
if (
    ierr )
```

**9.50.1.15 if()** [5/6]

```
if (
    print_freq ,
    print_freq= 50 )
```

**9.50.1.16 if()** [6/6]

```
if (
    pz ,
    0 )
```

### 9.50.1.17 InitializeMGData()

```
InitializeMGData (
    f2cOperator ,
    rc ,
    xc ,
    Axf ,
    * mgData )
```

### 9.50.1.18 ZeroVector()

```
ZeroVector (
    x )
```

## 9.50.2 Variable Documentation

### 9.50.2.1 Ac

```
Af Ac = new SparseMatrix
```

### 9.50.2.2 alpha

```
double alpha = 0.0
```

### 9.50.2.3 Ap

```
Vector & Ap = data.Ap
```

### 9.50.2.4 Axf

```
InitializeVector * Axf = new Vector
```

**9.50.2.5 beta**

```
double beta = 0.0
```

**9.50.2.6 bv**

```
double* bv = 0
```

**9.50.2.7 curb**

```
curb = 0
```

**9.50.2.8 curLevelMatrix**

```
curLevelMatrix = curLevelMatrix->Ac
```

**9.50.2.9 curx**

```
curx = 0
```

**9.50.2.10 curxexact**

```
curxexact = 0
```

**9.50.2.11 else**

```
else
```

**Initial value:**

```
{  
ierr = ComputeSYMGS_ref(A, r, x)
```

### 9.50.2.12 f2cOperator

```
local_int_t* f2cOperator = new local_int_t[Af.localNumberOfRows]
```

### 9.50.2.13 geomc

```
Geometry* geomc = new Geometry
```

### 9.50.2.14 gix0

```
global_int_t gix0 = A.geom->gix0
```

### 9.50.2.15 giy0

```
global_int_t giy0 = A.geom->giy0
```

### 9.50.2.16 giz0

```
global_int_t giz0 = A.geom->giz0
```

### 9.50.2.17 gn timer

```
global_int_t gn timer = A.geom->gn timer
```

### 9.50.2.18 gny

```
global_int_t gny = A.geom->gny
```

### 9.50.2.19 gn timer

```
global_int_t gn timer = A.geom->gn timer
```

#### 9.50.2.20 ierr

```
int ierr = ComputeMG_ref(A, b_computed, x_overlap)
```

#### 9.50.2.21 localNumberOfRows

```
local_int_t localNumberOfRows = nxc\*nyc\*nzc
```

#### 9.50.2.22 mgData

```
Af mgData = new MGData
```

#### 9.50.2.23 normr

```
normr = 0.0
```

#### 9.50.2.24 nrow

```
local_int_t nrow = A.localNumberOfRows
```

#### 9.50.2.25 nx

```
void CheckProblem global_int_t nx = A.geom->nx
```

#### 9.50.2.26 nxc

```
nxc = nxf/2
```

#### 9.50.2.27 nxf

```
void GenerateCoarseProblem global_int_t nxf = Af.geom->nxf
```

**9.50.2.28 ny**

```
global_int_t ny = A.geom->ny
```

**9.50.2.29 nyc**

```
nyc = nyf/2
```

**9.50.2.30 nyf**

```
global_int_t nyf = Af.geom->ny
```

**9.50.2.31 nz**

```
global_int_t nz = A.geom->nz
```

**9.50.2.32 nzc**

```
nzc = nzf/2
```

**9.50.2.33 nzf**

```
global_int_t nzf = Af.geom->nz
```

**9.50.2.34 oldrtz**

```
double oldrtz = 0.0
```

**9.50.2.35 p**

```
Vector & p = data.p
```

**9.50.2.36 pAp**

```
double pAp = 0.0
```

**9.50.2.37 print\_freq**

```
int print_freq = 1
```

**9.50.2.38 pz**

```
int pz = Af.geom->pz
```

**9.50.2.39 r**

```
Vector & r = data.r
```

**9.50.2.40 rc**

```
InitializeVector * rc = new Vector
```

**9.50.2.41 return**

```
return
```

**9.50.2.42 rtz**

```
double rtz = 0.0
```

**9.50.2.43 t0**

```
double t0 = 0.0
```

**9.50.2.44 t1**

```
double t1 = 0.0
```

**9.50.2.45 t2**

```
double t2 = 0.0
```

**9.50.2.46 t3**

```
double t3 = 0.0
```

**9.50.2.47 t4**

```
double t4 = 0.0
```

**9.50.2.48 t5**

```
double t5 = 0.0
```

**9.50.2.49 t\_begin**

```
int CG double t_begin = mytimer()
```

**9.50.2.50 times**

```
times[0] = t1
```

**9.50.2.51 totalNumberOfRows**

```
global_int_t totalNumberOfRows = gnx*gny*gnz
```

**9.50.2.52 values**

```
testnorms_data values[i] = normr / normr0
```

**9.50.2.53 xc**

```
InitializeVector * xc = new Vector
```

**9.50.2.54 xexactv**

```
double* xexactv = 0
```

**9.50.2.55 xv**

```
const double *const xv = 0
```

**9.50.2.56 yv**

```
double* const yv = y.values
```

**9.50.2.57 z**

```
Vector & z = data.z
```

**9.50.2.58 zlc**

```
local_int_t zlc = 0
```

**9.50.2.59 zuc**

```
local_int_t zuc = 0
```

### 9.59.1 Variable Documentation

#### 9.59.1.1 arch\_name

```
std::string arch_name
```

#### 9.59.1.2 bytes\_to\_send

```
int bytes_to_send
```

#### 9.59.1.3 cc\_numa\_domain

```
int cc_numa_domain
```

#### 9.59.1.4 cc\_numa\_domain\_per\_socket

```
int cc_numa_domain_per_socket
```

#### 9.59.1.5 cores\_per\_socket

```
int cores_per_socket
```

#### 9.59.1.6 heterogeneous\_mode

```
int heterogeneous_mode
```

#### 9.59.1.7 node

```
int node
```

#### 9.59.1.8 primary\_processes

```
int primary_processes
```

#### 9.59.1.9 scaling\_cores

```
int scaling_cores
```

#### 9.59.1.10 secondary\_processes

```
int secondary_processes
```

#### 9.59.1.11 socket

```
int socket
```

#### 9.59.1.12 system\_number

```
int system_number
```

### 9.59.1.13 task\_per\_node

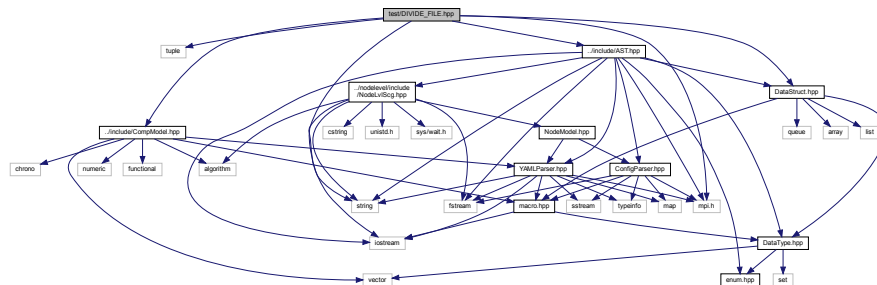

```
int task_per_node
```

### 9.59.1.14 virtual\_rank

```
int virtual_rank
```

## 9.60 test/DIVIDE\_FILE.hpp File Reference

```
#include <tuple>
#include <mpi.h>
#include <string>
#include "../include/CompModel.hpp"
#include "../include/AST.hpp"
#include "../include/DataStruct.hpp"
Include dependency graph for DIVIDE_FILE.hpp:

### 9.108.1 Variable Documentation

#### 9.108.1.1 [arch\\_name](#)

```
std::string arch_name
```

#### 9.108.1.2 [bytes\\_to\\_send](#)

```
int bytes_to_send
```

#### 9.108.1.3 [cc\\_numa\\_domain](#)

```
int cc_numa_domain
```

#### 9.108.1.4 [cc\\_numa\\_domain\\_per\\_socket](#)

```
int cc_numa_domain_per_socket
```

**9.108.1.5 cores\_per\_socket**

```
int cores_per_socket
```

**9.108.1.6 heterogeneous\_mode**

```
int heterogeneous_mode
```

**9.108.1.7 node**

```
int node
```

**9.108.1.8 primary\_processes**

```
int primary_processes
```

**9.108.1.9 scaling\_cores**

```
int scaling_cores
```

**9.108.1.10 secondary\_processes**

```
int secondary_processes
```

**9.108.1.11 socket**

```
int socket
```

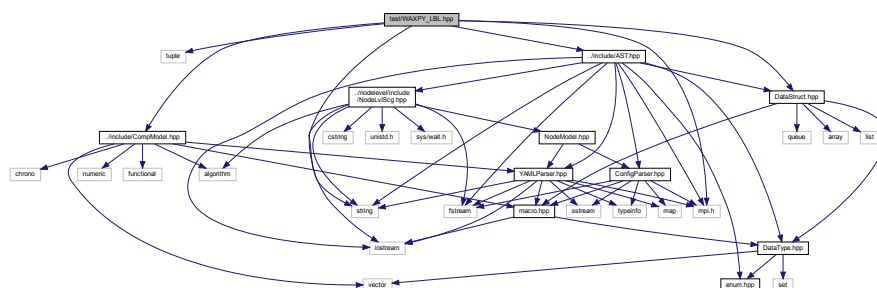

**9.108.1.12 system\_number**

```
int system_number
```

```
int task_per_node
```

```
int virtual_rank
```

```
#include <tuple>
#include <mpi.h>
